Machine Learning in Computer Vision Nicu Sebe,Ira Cohen,Ashutosh Garg,Thomas S. Huang,2005-10-04 The goal of this book is to address the use of several important machine learning techniques into computer vision applications An innovative combination of computer vision and machine learning techniques has the promise of advancing the field of computer vision which contributes to better understanding of complex real world applications The effective usage of machine learning technology in real world computer vision problems requires understanding the domain of application abstraction of a learning problem from a given computer vision task and the selection of appropriate representations for the learnable input and learned internal entities of the system In this book we address all these important aspects from a new perspective that the key element in the current computer revolution is the use of machine learning to capture the variations in visual appearance rather than having the designer of the model accomplish this As a bonus models learned from large datasets are likely to be more robust and more realistic than the brittle all design models

Machine Learning for Health Informatics Andreas Holzinger,2016-12-09 Machine learning ML is the fastest growing field in computer science and Health Informatics HI is amongst the greatest application challenges providing future benefits in improved medical diagnoses disease analyses and pharmaceutical development However successful ML for HI needs a concerted effort fostering integrative research between experts ranging from diverse disciplines from data science to visualization Tackling complex challenges needs both disciplinary excellence and cross disciplinary networking without any boundaries Following the HCI KDD approach in combining the best of two worlds it is aimed to support human intelligence with machine intelligence This state of the art survey is an output of the international HCI KDD expert network and features 22 carefully selected and peer reviewed chapters on hot topics in machine learning for health informatics they discuss open problems and future challenges in order to stimulate further research and international progress in this field

Artificial Intelligence and Brain Research Patrick Krauss,2024-07-12 How does artificial intelligence AI work and are there parallels to the human brain What do natural and artificial intelligence have in common and what are

the differences Is the brain nothing more than a biological computer What are neural networks and how can the term deep learning be explained simply Since the cognitive revolution in the middle of the last century AI and brain research have been closely intertwined There have been several spectacular breakthroughs in the field of AI in recent years from alphaGo to DALL E 2 and ChatGPT which were completely unthinkable until recently However researchers are already working on the innovations of tomorrow such as hybrid machine learning or neuro symbolic AI But what does this actually mean Based on current research findings and exciting practical examples this non fiction book provides an understandable introduction to the basics and challenges of these fascinating disciplines You will learn what neuroscience and psychology know about how the brain works and how artificial intelligence works You will also learn how AI has revolutionized our understanding of the brain and how findings from brain research are used in computer science to further develop AI algorithms Discover the fascinating world of these two disciplines Find out why artificial intelligence and brain research are two sides of the same coin and how they will shape our future
