Music Recommendation And Discovery Music Recommendation And Discovery:

Music Recommendation and Discovery Òscar Celma, 2010-11-04 In the last 15 years we have seen a major transformation in the world of music. Musicians use inexpensive personal computers instead of expensive recording studios to record mix and engineer music. Musicians use the Internet to distribute their work for free instead of spending large amounts of money creating CDs, hiring trucks and shipping them to hundreds of record stores. As the cost to create and distribute recorded music has dropped, the amount of available music has grown dramatically. Twenty years ago a typical record store would have music by less than ten thousand artists, while today online music stores have music catalogs by nearly a million artists. While the amount of new music has grown, some of the traditional ways of finding music have diminished. Thirty years ago the local radio DJ was a music tastemaker finding new and interesting music for the local radio audience. Now radio shows are programmed by large corporations that create playlists drawn from a limited pool of tracks. Similarly, record stores have been replaced by big box retailers that have ever-shrinking music departments. In the past you could always ask the owner of the record store for music recommendations. You would learn what was new, what was good, and what was selling. Now, however, you can no longer expect that the teenager behind the cash register will be an expert in new music or even be someone who listens to music at all. Collaborative Recommendations: Algorithms, Practical Challenges And Applications

Shlomo Berkovsky, Ivan Cantador, Domonkos Tikk, 2018-11-30 Recommender systems are very popular nowadays as both an academic research field and services provided by numerous companies for e-commerce, multimedia and Web content. The book chapters include algorithm implementations, elaborate on practical issues faced when deploying these algorithms in large-scale systems, describe various optimizations and decisions made, and list parameters of the algorithms.
