**Multiscale Modeling for Process Safety Applications** Arnab Chakrabarty, Sam Mannan, Tahir Cagin, 2015-11-29  
Multiscale Modeling for Process Safety Applications is a new reference demonstrating the implementation of multiscale modeling techniques on process safety applications. It is a valuable resource for readers interested in theoretical simulations and/or computer simulations of hazardous scenarios. As multi-scale modeling is a computational technique for solving problems involving multiple scales such as how a flammable vapor cloud might behave if ignited, this book provides information on the fundamental topics of toxic fire and air explosion modeling as well as modeling jet and pool fires using computational fluid dynamics. The book goes on to cover nanomaterial toxicity, QPSR analysis on relation of chemical structure to flash point, molecular structure and burning velocity, first principle studies of reactive chemicals, water and air reactive chemicals and dust explosions. Chemical and process safety professionals as well as faculty and graduate researchers will benefit from the detailed coverage provided in this book. Provides the only comprehensive source addressing the use of multiscale modeling in the context of process safety. Bridges multiscale modeling with process safety enabling the reader to understand mapping between problem detail and effective usage of resources. Presents an overall picture of addressing safety problems in all levels of modeling and the latest approaches to each in the field. Features worked out examples, case studies and a question bank to aid understanding and involvement for the reader. *Computational Fluid Dynamics* Adela Ionescu, 2018-02-14 This book is the result of a careful selection of contributors in the field of CFD. It is divided into three sections according to the purpose and approaches used in the development of the contributions. The first section describes the high performance computing (HPC) tools and their impact on CFD modeling. The second section is dedicated to CFD models for local and large scale industrial phenomena. Two types of approaches are basically contained here: one concerns the adaptation from global to local scale, e.g. the applications of CFD to study the climate changes and the adaptations to local scale. The second approach, very challenging, is the multiscale analysis. The third section is devoted to CFD in numerical modeling approach for experimental cases. Its chapters emphasize on the numerical approach of the mathematical models associated to few experimental industrial cases. Here the impact and the importance of the mathematical modeling in CFD are focused on. It is expected that the collection of these chapters will enrich the state of the art in the CFD domain and its applications in a lot of fields. This collection proves that CFD is a highly interdisciplinary research area which lies at the interface of physics, engineering, applied mathematics and computer science. *Machine Learning in Chemical Safety and Health* Qingsheng Wang, Changjie Cai, 2022-10-21 Introduces Machine Learning Techniques and Tools and Provides Guidance on How to Implement Machine Learning Into Chemical Safety and Health related Model Development.
