Risks In Technological Systems Springer Series In Reliability Engineering:

Risks in Technological Systems Göran Grimvall, Åke Holmgren, Per Jacobsson, Torbjörn Thedéen, 2009-10-24 Risks in Technological Systems is an interdisciplinary university textbook and a book for the educated reader on the risks of today's society. In order to understand and analyze risks associated with the engineering systems on which modern society relies, other concerns have to be addressed besides technical aspects. In contrast to many academic textbooks dealing with technological risks, this book has a unique interdisciplinary character that presents technological risks in their own context. Twenty-four scientists have come together to present their views on risks in technological systems. Their scientific disciplines cover not only engineering, economics, and medicine but also history, psychology, literature, and philosophy. Taken together, these contributions provide a broad but accurate interdisciplinary introduction to a field of increasing global interest, as well as rich opportunities to achieve in-depth knowledge of the subject. *Risk, Reliability and Safety: Innovating Theory and Practice* Lesley Walls, Matthew Revie, Tim Bedford, 2016-11-25 The safe and reliable performance of many systems with which we interact daily has been achieved through the analysis and management of risk. From complex infrastructures to consumer durables, from engineering systems and technologies used in transportation, health, energy, chemical, oil, gas, aerospace, maritime, defence, and other sectors, the management of risk during design, manufacture, operation, and decommissioning is vital. Methods and models to support risk-informed decision making are well established but are continually challenged by technology innovations, increasing interdependencies, and changes in societal expectations. *Risk, Reliability and Safety* contains papers describing innovations in theory and practice contributed to the scientific programme of the European Safety and Reliability conference ESREL 2016 held at the University of Strathclyde in Glasgow, Scotland, 25-29 September 2016. Authors include scientists, academics, practitioners, regulators, and other key individuals with expertise and experience relevant to specific areas. Papers include domain-specific applications as well as general modelling methods. Papers cover evaluation of contemporary solutions, exploration of future challenges, and exposition of concepts, methods, and processes. Topics include human factors, occupational health and safety, dynamic and systems reliability, modelling, maintenance, optimisation, uncertainty analysis, resilience, assessment, risk, and crisis management. **Risk-informed Methods and Applications in Nuclear and Energy Engineering** Curtis Smith, Diego Mandelli, Katya Le Blanc, 2023-11-16 Risk-informed Methods and Applications in Nuclear and Energy Engineering: Modelling, Experimentation, and Validation presents a comprehensive view of the latest technical approaches and experimental capabilities in nuclear energy engineering. Based on Idaho National Laboratory's popular summer school series, this book compiles a collection of entries on the cutting-edge research and knowledge presented by proponents and developers of current and future nuclear systems, focusing on the connection between modelling and experimental approaches. Included in this book are key topics such as probabilistic concepts for risk analysis, the survey of legacy reliability and risk analysis tools, and newly developed tools supporting

dynamic probabilistic risk assessment This book is an insightful and inspiring compilation of work from top nuclear experts from INL Industry professionals researchers and academics working in nuclear engineering safety operations and training will gain a board picture of the current state of practice and be able to apply that to their own risk assessment studies Based on Idaho National Laboratory s summer school series this book is a collection of entries from proponents and developers of current and future nuclear systems Provides an up to date view of current technical approaches and experimental capabilities in nuclear energy engineering covering modeling and validation and focusing on risk informed methods and applications Equips the reader with an understanding of various case studies and experimental validations to enable them to carry out a risk assessment study
