Summary of Soil-structure Interaction Jay R. Allgood, 1972 The report summarizes currently available knowledge of soil structure interaction as it pertains to facilities that provide protection from nuclear weapons effects The major subdivisions of the subject are discussed in sufficient detail to convey a general understanding of the subject and to provide key references The recommended design methodology is illustrated for the horizontally oriented buried cylinder A parallel approach is suggested for buried structures of other configurations It is suggested that analysis of resulting designs be accomplished by the finite element method Illustrations of two dimensional and three dimensional solutions by this method are given Author **Technical Report - Civil Engineering Laboratory, Naval Construction Battalion Center, Port**
