Parallel Computation and Computers for Artificial Intelligence J.S. Kowalik, 2012-12-06 It has been widely recognized that artificial intelligence computations offer large potential for distributed and parallel processing Unfortunately not much is known about designing parallel AI algorithms and efficient easy to use parallel computer architectures for AI applications The field of parallel computation and computers for AI is in its infancy but some significant ideas have appeared and initial practical experience has become available The purpose of this book has been to collect in one volume contributions from several leading researchers and pioneers of AI that represent a sample of these ideas and experiences This sample does not include all schools of thought nor contributions from all leading researchers but it covers a relatively wide variety of views and topics and in this sense can be helpful in assessing the state of the art We hope that the book will serve at least as a pointer to more specialized literature and that it will stimulate interest in the area of parallel AI processing It has been a great pleasure and a privilege to cooperate with all contributors to this volume They have my warmest thanks and gratitude Mrs Birgitta Knapp has assisted me in the editorial task and demonstrated a great deal of skill and patience Janusz S Kowalik vii INTRODUCTION Artificial intelligence AI computer programs can be very time consuming **From Semantics to Computer Science** Gilles Kahn, Yves Bertot, 2009-09-24 Gilles Kahn was one of the most influential figures in the development of computer science and information technology not only in Europe but throughout the world This volume of articles by several leading computer scientists serves as a fitting memorial to Kahn's achievements and reflects the broad range of subjects to which he contributed through his scientific research and his work at INRIA the French National Institute for Research in Computer Science and Control The authors also reflect upon the future of computing how it will develop as a subject in itself and how it will affect other disciplines from biology and medical informatics to web and networks in general Its breadth of coverage topicality originality and depth of contribution make this book a stimulating read for all those interested in the future development of information technology *Artificial Intelligence with Common Lisp* James L. Noyes, 1992 The book provides a balanced survey of the fundamentals of artificial intelligence emphasizing the relationship between symbolic and numeric processing The text is structured around an innovative interactive combination of LISP programming and AI it uses the constructs of the programming language to help readers understand the array of artificial intelligence concepts presented After an overview of the field of artificial intelligence the text presents the fundamentals of LISP explaining the language's features in more detail than any other AI text Common Lisp is then used consistently in both programming exercises and plentiful examples of actual AI code Back cover This text is intended to provide an introduction to both AI and LISP for those having a background in computer science and mathematics Pref Structure and Interpretation of Computer Programs, second edition Harold Abelson, Gerald Jay Sussman, 1996-07-25 Structure and Interpretation of Computer Programs has had a dramatic impact on computer science curricula over the past decade This

long awaited revision contains changes throughout the text There are new implementations of most of the major programming systems in the book including the interpreters and compilers and the authors have incorporated many small changes that reflect their experience teaching the course at MIT since the first edition was published A new theme has been introduced that emphasizes the central role played by different approaches to dealing with time in computational models objects with state concurrent programming functional programming and lazy evaluation and nondeterministic programming There are new example sections on higher order procedures in graphics and on applications of stream processing in numerical programming and many new exercises In addition all the programs have been reworked to run in any Scheme implementation that adheres to the IEEE standard
