Riding The Tiger Tiger Conservation In Human Dominated Landscapes:

Riding the Tiger. Tiger conservation in human-dominated landscapes, 1999 Tigers of the World Ronald Tilson, Philip J. Nyhus, 2009-11-30 Tigers of the World Second Edition explores tiger biology ecology conservation management and the science and technology that make this possible In 1988 when the first edition was published tiger conservation was still in its infancy and two decades later there has been a revolution not only in what is known but how information about tigers is obtained and disseminated In the fast changing world of conservation there is a great need to summarize the vast and current state of the art to put this into historical perspective and to speculate in what yet remains to be done Tigers of the World Second Edition fulfills this need by bringing together in a unique way the world's leading tiger experts into one volume Despite the challenges ahead there are bright spots in this story and lessons aplenty not only for tiger specialists but large carnivore specialists conservation biologists wildlife managers natural resource policymakers and most importantly the caring public Examines the past twenty years of research from the world's leading tiger experts on biology politics and conservation Describes latest methods used to disseminate and obtain information needed for conservation and care of this species Includes coverage on genetics and ecology policy poaching and trade captive breeding and farming and the status of Asia's last wild tigers Excellent resource for grad courses in conservation biology wildlife management and veterinary programs New volume continues the classic Noyes Series in Animal Behavior Ecology Conservation and Management Methods For Monitoring Tiger And Prey Populations K. Ullas Karanth, James D. Nichols, 2017-10-26 This book addresses issues of monitoring populations of tigers ungulate prey species and habitat occupancy with relevance to similar assessments of large mammal species and general biodiversity It covers issues of rigorous sampling modeling estimation and adaptive management of animal populations using cutting edge tools such as camera traps genetic identification and Geographic Information Systems GIS applied under the modern statistical approach of Bayesian and likelihood based inference Of special focus here are animal survey data derived for use under spatial capture recapture occupancy distance sampling mixture modeling and connectivity analyses Because tigers are an icons of global conservation in last five decades enormous amounts of commitment and resources have been invested by tiger range countries and the conservation community for saving wild tigers However status of the big cat remains precarious Rigorous monitoring of surviving wild tiger populations continues to be essential for both understanding and recovering wild tigers However many tiger monitoring programs lack the necessary rigor to generate the reliable results While the deployment of technologies analyses computing power and human resource investments in tiger monitoring have greatly progressed in the last couple of decades a full comprehension of their correct deployment has not kept pace in practice In this volume Dr Ullas Karanth and Dr James Nichols world leaders in tiger biology and quantitative ecology respectively address this key challenge The have collaborated with an extraordinary array of 30 scientists with expertise in a range of necessary disciplines biology

and ecology of tigers prey and habitats advanced statistical theory and practice computation and programming practical field sampling methods that employ technologies as varied as camera traps genetic analyses and geographic information systems The book is a tour de force of cutting edge methodologies for assessing not just tigers but also other predators and their prey The 14 chapters here are lucidly presented in a coherent sequence to provide tiger specific answers to fundamental questions in animal population assessment why monitor what to monitor and how to monitor While highlighting robust methods the authors also clearly point out those that are in use but unreliable The managerial dimension of tiger conservation described here the task of matching monitoring objectives with skills and resources to integrate tiger conservation under an adaptive framework also renders this volume useful to wildlife scientists as well as conservationists

A Goal-Oriented Approach to Forest Landscape Restoration John Stanturf, Palle Madsen, David Lamb, 2012-12-05

While restoration ecology has traditionally aimed to re create some putative more natural ecological state forest landscape restoration FLR has emerged over the last decade as an approach aimed more at restoring natural functions while focusing on meeting human needs With a view to exploring the practical potential of this approach this book draws together a team of experts from the natural and social sciences to discuss its success so far in addressing critical issues such as biodiversity ecological function and human livelihoods Applying principles of landscape ecology restoration ecology planning theory and conflict management the book presents a series of case studies which document the approach and discusses how the approach can help with priority setting for the future The book will provide a valuable reference to graduate students and researchers interested in ecological restoration forest ecology and management as well as to professionals in environmental restoration natural resource management conservation and environmental policy *Soul of the Rhino* Hemanta

Mishra, 2009-09-01 A spirited yet humble account of one man's scientific career and personal journey to save the endangered rhinoceros in his native Nepal In early 2006 National Public Radio reported that A promising conservation effort to save one of Nepal's signature endangered species is now in serious trouble due primarily to poachers taking advantage of fighting between government forces and Maoist insurgents This was devastating news indeed to author and scientist Hemanta Mishra who has spent the better part of his adult life struggling to save the Indian Rhino from extinction in his native Nepal The Soul of the Rhino is the spirited yet humble account of Mishra's unique personal journey Fresh out of university in the 1970s Mishra embarks on his conservation work with the help of an ornery but steadfast elephant driver the Nepalese royal family and handfuls of like minded scientists whose aim is to protect the animal in the foothills of the Himalayas Yet in spite of decades spent creating nature reserves and moving rhinos to protected areas arm wrestling politicians and raising awareness for the cause Mishra is still fearful about the future of the Indian Rhino To this day Nepal is overrun by armed insurgents political violence and poachers who could kill off this magnificent creature for good Filled with candor and bittersweet humor Mishra re creates his journey on behalf of the rhino an ugly yet enchanting terrifying yet delicate creature

The first book of its kind to delve into the multi layered political labyrinths of South Asian wildlife conservation and one man s endurance in the face of it all *The Soul of the Rhino* is sure to win over your heart and soul A mix of Western science and Eastern mythology this book could be called *Zen and the Art of Rhinoceros Maintenance* New York Post Mishra s a gutsy committed man and a charming writer and the rhinos could have no faster friend National Geographic Adventure Unusual fascinating and important *The Soul of the Rhino* provides not only a rare insight into the personality and behavior of the highly endangered and little known Asian rhino but an equally absorbing picture of the people who share its habitat Dr Jane Goodall DBE founder the Jane Goodall Institute UN Messenger of Peace Mishra describes his contacts with everyone from poacher and foreigner to bureaucrat royalty and rhino I enjoyed *The Soul of the Rhino* immensely George B Schaller Wildlife Conservation Society This is the first book of its kind that proves that nature conservation in Asia does not only depend upon good Western science But like politics in America it is an art Lodi Gyari Special Envoy of His Holiness the Dalai Lama For anyone interested in wildlife the Himalayan region Hindu and Buddhist culture this book is a delight Kenneth Nebenzahl director of the American Himalayan Foundation member of the WWF US Council *Proceedings of the 4th International Conference of Local Wisdom (Incolwis 2022)* Prasetyo Adi Wisnu Wibowo, Sumarlam Sumarlam, Wakit Abdullah Rais, Dewanta Arya Nugraha, 2024-05-17 This is an open access book Every nation has local wisdom which is the hallmark of the different marks icons of a nation from the others As a marker different local wisdom can be reflected in the forms of mindset pattern of action and patterns of local wisdom products Mindset is a way of life of a nation in coping with various phenomena of life The patterns of action is the realization of mindset in the forms of human behaviors The last are the material works that represent the previous two mindset and patterns of action For local wisdom to be recognized worldwide it needs to be explored studied and published globally local to global The globalization spread of local wisdom to the other world is expected to provide an interaction space among its owners In addition the interaction of local wisdom is expected to contribute to the implementation of basic human values in the interaction with God human and nature *Intersections of Conservation Biogeography and Wildlife Management* Kaushalendra Kumar Jha, Michael O'Neal Campbell, 2025-10-25 This book offers a novel approach to the new science of conservation biogeography for the more effective assessment and management of human animal relationships supported by natural and social science perspectives and technological developments Conservation biogeography offers a deeper understanding of the modern context of rapid environmental change politicized and polarized opinions on conservation and the role for computational technology Conservation biogeography includes individual perspectives within conservation psychology and group based issues in broad social economic and political contexts Concepts examined include intersections between wildlife charisma and conservation perspectives on trophy hunting and human environment relationships environmental applications of geomatics and computerization This book contributes to the interests of academic researchers students practitioners and policymakers and

general readers *People and Wildlife, Conflict or Co-existence?* Rosie Woodroffe, Simon Thirgood, Alan Rabinowitz, 2005-08-25 Human wildlife conflict is a major issue in conservation As people encroach into natural habitats and as conservation efforts restore wildlife to areas where they may have been absent for generations contact between people and wild animals is growing Some species even the beautiful and endangered can have serious impacts on human lives and livelihoods Tigers kill people elephants destroy crops and African wild dogs devastate sheep herds left unattended Historically people have responded to these threats by killing wildlife wherever possible and this has led to the endangerment of many species that are difficult neighbours The urgent need to conserve such species however demands coexistence of people and endangered wildlife This book presents a variety of solutions to human wildlife conflicts including novel and traditional farming practices offsetting the costs of wildlife damage through hunting and tourism and the development of local and national policies

Spatial Dynamics and Ecology of Large Ungulate Populations in Tropical Forests of India N. Samba Kumar, K. Ullas Karanth, James D. Nichols, Srinivas Vaidyanathan, Beth Gardner, Jagdish Krishnaswamy, 2020-11-02 Large ungulates in tropical forests are among the most threatened taxa of mammals Excessive hunting degradation of and encroachments on their natural habitats by humans have contributed to drastic reductions in wild ungulate populations in recent decades As such reliable assessments of ungulate habitat relationships and the spatial dynamics of their populations are urgently needed to provide a scientific basis for conservation efforts However such rigorous assessments are methodologically complex and logistically difficult and consequently many commonly used ungulate population survey methods do not address key problems As a result of such deficiencies key parameters related to population distribution abundance habitat ecology and management of tropical forest ungulates remain poorly understood This book addresses this critical knowledge gap by examining how population abundance patterns in five threatened species of large ungulates vary across space in the tropical forests of the Nagarhole Bandipur reserves in southwestern India It also explains the development and application of an innovative methodology spatially explicit line transect sampling based on an advanced hierarchical modelling under the Bayesian inferential framework which overcomes common methodological deficiencies in current ungulate surveys The methods and results presented provide valuable reference material for researchers and professionals involved in studying and managing wild ungulate populations around the globe

Tiger Bone & Rhino Horn Richard Ellis, 2013-02-22 In parts of Korea and China moon bears black but for the crescent shaped patch of white on their chests are captured in the wild and brought to bear farms where they are imprisoned in squeeze cages and a steel catheter is inserted into their gall bladders The dripping bile is collected as a cure for ailments ranging from an upset stomach to skin burns The bear may live as long as fifteen years in this state Rhinos are being illegally poached for their horns as are tigers for their bones thought to improve virility Booming economies and growing wealth in parts of Asia are increasing demand for these precious medicinals Already endangered species are being sacrificed for temporary treatments for nausea and erectile

dysfunction Richard Ellis one of the world's foremost experts in wildlife extinction brings his alarm to the pages of Tiger Bone Rhino Horn in the hope that through an exposure of this drug trade something can be done to save the animals most directly threatened Trade in animal parts for traditional Chinese medicine is a leading cause of species endangerment in Asia and poaching is increasing at an alarming rate Most of traditional Chinese medicine relies on herbs and other plants and is not a cause for concern Ellis illuminates those aspects of traditional medicine but as wildlife habitats are shrinking for the hunted large species the situation is becoming ever more critical One hundred years ago there were probably 100 000 tigers in India South China Sumatra Bali Java and the Russian Far East The South Chinese Caspian Balinese and Javan species are extinct There are now fewer than 5 000 tigers in all of India and the numbers are dropping fast There are five species of rhinoceros three in Asia and two in Africa and all have been hunted to near extinction so their horns can be ground into powder not for aphrodisiacs as commonly thought but for ailments ranging from arthritis to depression In 1930 there were 80 000 black rhinos in Africa Now there are fewer than 2 500 Tigers bears and rhinos are not the only animals pursued for the sake of alleviating human ills the list includes musk deer sharks saiga antelope seahorses porcupines monkeys beavers and sea lions but the dwindling numbers of those rare species call us to attention Ellis tells us what has been done successfully and contemplates what can and must be done to save these animals or sadly our children will witness the extinction of tigers rhinos and moon bears in their lifetime
