Navigating Social Ecological Systems Building Resilience For Complexity And Change:

Navigating Social-Ecological Systems Fikret Berkes, Johan Colding, Carl Folke, 2008-04-24 In the effort towards sustainability it has become increasingly important to develop conceptual frames to understand the dynamics of social and ecological systems Drawing on complex systems theory this book investigates how human societies deal with change in linked social ecological systems and build capacity to adapt to change The concept of resilience is central in this context Resilient social ecological systems have the potential to sustain development by responding to and shaping change in a manner that does not lead to loss of future options Resilient systems also provide capacity for renewal and innovation in the face of rapid transformation and crisis The term navigating in the title is meant to capture this dynamic process Case studies and examples from several geographic areas cultures and resource types are included merging forefront research from natural sciences social sciences and the humanities into a common framework for new insights on sustainability

Resilience in Social-Ecological Systems Marianne E. Krasny, Cecilia Lundholm, Ryan Plummer, 2013-10-18 Resilience thinking challenges us to reconsider the meaning of sustainability in a world that must constantly adapt in the face of gradual and at times catastrophic change This volume further asks environmental education and resource management scholars to consider the relationship of environmental learning and behaviours to attributes of resilient social ecological systems attributes such as ecosystem services innovative governance structures biological and cultural diversity and social capital Similar to current approaches to environmental education and education for sustainable development resilience scholarship integrates social and ecological perspectives The authors of Resilience in social ecological systems the role of learning and education present a wealth of perspectives integrating theory with reviews of empirical studies in natural resource management and in youth adult and higher education The authors explore the role of education and learning in helping social ecological systems as they respond to change through adaptation and transformation This book also serves to integrate a growing literature on resilience and social learning in natural resources management with research in environmental education and education for sustainable development This book was originally published as a special issue of Environmental Education Research

Adaptive Co-Management Derek Armitage, Fikret Berkes, Nancy Doubleday, 2010-10-01 In Canada and around the world governments are shifting away from regulatory models for governing natural and cultural resources New concerns with adaptive processes feedback learning and flexible partnerships are reshaping environmental governance Meanwhile ideas about collaboration and learning are converging around the idea of adaptive co management This book provides a comprehensive synthesis of the core concepts strategies and tools in this emerging field informed by a diverse group of researchers and practitioners with over two decades of experience It also offers a diverse set of case studies that reveal the challenges and implications of adaptive co management thinking and synthesizes lessons for natural and cultural resource governance in a wide range of contexts Adaptive Co Management is not only a timely book but also a useful concept

for resource governance in a world marked by rapid socio ecological change It will be of interest to researchers environmental practitioners policy makers and students in fields across the political and environmental spectrum *The SAGE Handbook of Environment and Society* Jules Pretty, Andy Ball, Ted Benton, Julia Guivant, David R Lee, David Orr, Max Pfeffer, Professor Hugh Ward, 2007-10-30 A monumental and timely contribution to scholarship on society and environments The handbook makes it easy and compelling for anyone to learn about that scholarship in its full manifestations and as represented by some of the most highly respected researchers and thinkers in the English speaking world It is wide reaching in scope and far reaching in its implications for public and private action a definite must for serious researchers and their libraries Bonnie J McCay Rutgers University This is the desert island book for anyone interested in the relationship between society and the environment The editors have assembled a masterful collection of contributions on every conceivable dimension of environmental thinking in the social sciences and humanities No library should be without it Robyn Eckersley University of Melbourne The SAGE Handbook of Environment and Society focuses on the interactions between people societies and economies and the state of nature and the environment Editorially integrated but written from multi disciplinary perspectives it is organised in seven sections Environmental thought past and present Valuing the environment Knowledges and knowing Political economy of environmental change Environmental technologies Redesigning natures Institutions and policies for influencing the environment Key themes include locations where the environment society relation is most acute where for example there are few natural resources or where industrialization is unregulated the discussion of these issues at different scales local regional national and global the cost of damage to resources and the relation between principal actors in the environment society nexus Aimed at an international audience of academics research students researchers practitioners and policy makers The SAGE Handbook of Environment and Society presents readers in social science and natural science with a manual of the past present and future of environment society links *Green Utopianism* Karin Bradley, Johan Hedrén, 2014-03-21 Utopian thought and experimental approaches to societal organization have been rare in the last decades of planning and politics Instead there is a widespread belief in ecological modernization that sustainable societies can be created within the frame of the current global capitalist world order by taking small steps such as eco labeling urban densification and recycling However in the context of the current crisis in which resource depletion climate change uneven development and economic instability are seen as interlinked this belief is increasingly being questioned and alternative developmental paths sought This collection demonstrates how utopian thought can be used in a contemporary context as critique and in exploring desired futures The book includes theoretical perspectives on changing global socio environmental relationships and political struggles for alternative development paths and analyzes micro level practices in co housing alternative energy provision use of green space transportation co production of urban space peer to peer production and consumption and alternative economies It contributes research perspectives on contemporary green

utopian practices and strategies combining theoretical and empirical analyses to spark discussions of possible futures

Innovative Built Heritage Models Koenraad van Balen, Aziliz Vandesande, 2018-01-29 Several international and European institutions have given increasing importance to sustainable approaches to our existing building stock and the role of built heritage in this process At the same time preventive and planned conservation of built heritage has been increasingly recognised by researchers given its cost effectiveness for owner managers effective long term quality protection and environmental enhancement of structures as well as its potential of activating heritage in the employment sector and empowering of local communities Innovative Built Heritage Models collects the lectures presented at the international conference on CHANGES 2017 Thematic Week Leuven Belgium 6 8 February 2017 The aim of the conference was to provide an international overview of the existing strategies processes and operational case studies that support the implementation of a preventive and planned conservation approach in the built heritage sector The conference twins with the CHANGES project supported by the Joint Programming Initiative Heritage Plus programme This publication meets the increasing demand for shared information to support the transition towards a more sustainable conservation process The volume consists of three main parts The CHANGES paradigm Preventive and planned conservation and Case studies of Change The book reflects on CHANGES in a straightforward manner by providing research and case studies that serve as baseline records guidance and essential literature for researchers and practitioners involved in the built heritage sector

Social-Ecological Systems in Transition Shoko Sakai,Chieko Umetsu,2014-08-12 This book presents an overview of current knowledge about social ecological systems SESs a productive new field dedicated to understanding the relationships between human society and nature To make the reader aware of how SESs are necessary to maintain our society the book begins with a broad perspective about what social ecological systems are and what the related research issues in this field are as well The second part discusses how human activities have changed ecosystems from temperate grasslands to tropical areas The third part focuses on the adaptability of societies to unpredictable fluctuation in ecosystems while the last part summarizes factors for the resilience of society against social and ecological shocks Human activities have severely degraded most natural ecosystems which are now in critical condition Various approaches have been developed to improve the SESs to understand environmental problems and explore better ways to increase the sustainability both of ecosystems and of human societies However a clear perspective on how to address such problems is still lacking Part of the difficulty arises because of the diversity and complexity of ecosystems and human societies Another important factor is the effect of extremely rapid changes in the social and economic characteristics of social ecological systems Consequently adaptability and resilience clearly are essential for the sustainability of SESs Although there is no one direct method to achieve high adaptability and resilience a possible way is to compare and understand the diverse problems associated with differing social ecological systems This published work makes a useful contribution to a greater understanding of the way that essential social responses linked to changes in ecosystems can potentially stimulate further research on this important and interesting subject The book will attract the attention of scholars in environmental sciences ecology and sociology and indeed of anyone interested in the concept of social ecological systems
