Statistical Inference and Simulation for Spatial Point Processes Jesper Moller, Rasmus Plenge Waagepetersen, 2003-09-25

Spatial point processes play a fundamental role in spatial statistics and today they are an active area of research with many new applications. Although other published works address different aspects of spatial point processes, most of the classical literature deals only with nonparametric methods and a thorough treatment of the theory and applications of simulation-based inference is difficult to find. Written by researchers at the top of the field, this book collects and unifies recent theoretical advances and examples of applications. The authors examine Markov chain Monte Carlo algorithms and explore one of the most important recent developments in MCMC: perfect simulation procedures. **Markov Chain Monte Carlo** W. S. Kendall, Faming Liang, 2005

Markov Chain Monte Carlo MCMC originated in statistical physics but has spilled over into various application areas, leading to a corresponding variety of techniques and methods. That variety stimulates new ideas and developments from many different places, and there is much to be gained from cross-fertilization. This book presents five expository essays by leaders in the field, drawing from perspectives in physics, statistics, and genetics, and showing how different aspects of MCMC come to the fore in different contexts. The essays derive from tutorial lectures at an interdisciplinary program at the Institute for Mathematical Sciences, Singapore, which exploited the exciting ways in which MCMC spreads across different disciplines. *Hierarchical Modeling and Analysis for Spatial Data* Sudipto Banerjee, Alan E. Gelfand, Bradley P. Carlin, 2025-09-23

Hierarchical Modeling and Analysis for Spatial Data Third Edition is the latest edition of this popular and authoritative text on Bayesian modeling and inference for spatial and spatio-temporal data. The text presents a comprehensive and up-to-date treatment of hierarchical and multilevel modeling for spatial and spatio-temporal data within a Bayesian framework. Over the past decade, since the second edition, spatial statistics has evolved significantly, driven by an explosion in data availability and advances in Bayesian computation. This edition reflects those changes, introducing new methods, expanded applications, and enhanced computational resources to support researchers and practitioners across disciplines, including environmental science, ecology, and public health. Key features of the third edition: A dedicated chapter on state-of-the-art Bayesian modeling of large spatial and spatio-temporal datasets. Two new chapters on spatial point pattern analysis, covering both foundational and Bayesian perspectives. A new chapter on spatial data fusion, integrating diverse spatial data sources from different probabilistic mechanisms. An accessible introduction to GPS mapping, geodesic distances, and mathematical cartography. An expanded special topics chapter, including spatial challenges with finite population modeling and spatial directional data. A thoroughly revised chapter on Bayesian inference, featuring an updated review of modern computational techniques. A dedicated GitHub repository providing R programs and solutions to selected exercises, ensuring continued access to evolving software developments. With refreshed content throughout, this edition serves as an essential reference for statisticians, data scientists, and researchers working with spatial data. Graduate students

and professionals seeking a deep understanding of Bayesian spatial modeling will find this volume an invaluable resource for both theory and practice
