Doonan,2018-08-16 As a consequence of the global climate change both the reduction on yield potential and the available surface area of cultivated species will compromise the production of food needed for a constant growing population There is consensus about the significant gap between world food consumption projected for the coming decades and the expected crop yield improvements which are estimated to be insufficient to meet the demand The complexity of this scenario will challenge breeders to develop cultivars that are better adapted to adverse environmental conditions therefore incorporating a new set of morpho physiological and physico chemical traits a large number of these traits have been found to be linked to heat and drought tolerance Currently the only reasonable way to satisfy all these demands is through acquisition of high dimensional phenotypic data high throughput phenotyping allowing researchers with a holistic comprehension of plant responses or Phenomics Phenomics is still under development This Research Topic aims to be a contribution to the progress of methodologies and analysis to help understand the performance of a genotype in a given environment **Manual of Antisense Methodology** Gunther Hartmann,Stefan Endres,2012-12-06 In the past few years antisense methodology has moved from in vitro studies to in vivo studies and first human trials While the basic concept of antisense technology is simple the methodological problems associated with its use are numerous and complex Antisense based methods have proven to be a field of research where careful attention to experimental protocols and appropriate controls is necessary The Manual of Antisense Methodology emphasizes the application of antisense oligonucleotides and is a guide for the identification of antisense and non antisense effects in different experimental settings The work is organized into three sections antisense application in vitro antisense application in vivo animal models and finally clinical antisense studies Where at all possible the methods are described in sufficient detail to allow reproduction of a given experiment The Manual of Antisense Methodology will be of interest to researchers in immunology cancer research pharmacology and internal medicine and physicians conducting clinical studies in these fields **RAMIRAN 2017: Sustainable Utilisation of Manures and Residue Resources in Agriculture** Tom Misselbrook,Francisco Javier Salazar,Claudia Wagner-Riddle,2019-12-30 This eBook presents highlight papers from the 17th International conference of the Recycling of Agricultural Municipal and Industrial Residues to Agriculture Network RAMIRAN that was held in Wexford Ireland in September 2017 The book contains a broad range of papers around this multidisciplinary theme covering topics including regional and national organic resource use planning impact of livestock diet on manure composition fate and utilisation of excreta from grazing livestock anaerobic digestion overcoming barriers to resource reuse hygienic aspects of residue
