

People and plants

IN ANCIENT WESTERN NORTH AMERICA

EDITED BY PAUL E. MINNIS

People And Plants In Ancient Western North America

**Elizabeth Reitz, C. Margaret
Scarry, Sylvia J. Scudder**

People And Plants In Ancient Western North America:

People and Plants in Ancient Western North America Paul E. Minnis, 2004 The environmental diversity of North America is astounding from circumpolar tundra with a small number of plants more than a few centimeters tall to the lush semitropical forests of the southeastern United States and the Caribbean Basin No less remarkable is the record of plant usage by the various indigenous peoples who have been living here for more than 12 000 years For the vast majority of this time their livelihood food shelter fuel and medicine depended on their knowledge and use of the plants that surrounded them The most comprehensive overview in more than half a century on the interconnectedness of people and plants this book and its companion volume *People and Plants in Ancient Eastern North America* present the latest information on three major topics the uses of native plants the history of crops and their uses and the impact of humans on their environment They not only contribute to our understanding of the lives of prehistoric people but also serve as guides for designing sustainable living today *The Oxford Handbook of North American Archaeology* Timothy R. Pauketat, 2012-02-23 The Oxford Handbook of North American Archaeology reviews the continent's first and last foragers farmers and great pre-Columbian civic and ceremonial centers from Chaco Canyon to Moundville and beyond

Case Studies in Environmental Archaeology Elizabeth Reitz, C. Margaret Scarry, Sylvia J. Scudder, 2008 This book highlights studies addressing significant anthropological issues in the Americas from the perspective of environmental archaeology The book uses case studies to resolve questions related to human behavior in the past rather than to demonstrate the application of methods Each chapter is an original or revised work by an internationally recognized scientist This second edition is based on the 1996 book of the same title The editors have invited back a number of contributors from the first edition to revise and update their chapter New studies are included in order to cover recent developments in the field or additional pertinent topics

People and Plants in Ancient Eastern North America Paul E. Minnis, 2010-01-15 Documents relating to Rivera's inspection of New Spain's military frontier presented in their original Spanish and in translation provide a detailed background by which modern scholars can better assess the status and role of Spain's military outposts *The Oxford Handbook of Historical Ecology and Applied Archaeology* Christian Isendahl, Daryl Stump, 2019-01-10 The Oxford Handbook of Historical Ecology and Applied Archaeology presents theoretical discussions methodological outlines and case studies describing the field of overlap between historical ecology and the emerging sub-discipline of applied archaeology to highlight how modern environments and landscapes have been shaped by humans Historical ecology is based on the recognition that humans are not only capable of modifying their environments but that all environments on earth have already been directly or indirectly modified This includes anthropogenic climate change widespread deforestations and species extinctions but also very local alterations the effects of which may last a few years or may have legacies lasting centuries or more With contributions from anthropologists archaeologists human geographers and historians this volume focuses not just on defining human impacts in

the past but on the ways that understanding these changes can help inform contemporary practices and development policies Some chapters present examples of how ancient or current societies have modified their environments in sustainable ways while others highlight practices that had unintended long term consequences The possibilities of learning from these practices are discussed as is the potential of using the long history of human resource exploitation as a method for building or testing models of future change The volume offers overviews for students researchers and professionals with an interest in conservation or development projects who want to understand what practical insights can be drawn from history and who seek to apply their work to contemporary issues Agricultural Beginnings in the American Southwest Barbara J.

Roth,2016-10-12 How did agriculture come about in the American Southwest What environmental and social factors led to the cultivation of plants How in turn did the use of these new agricultural products affect the ancient peoples living in the region In pursuit of answers to these questions Barbara Roth synthesizes data from both CRM and academic research to explore the emergence and impact of Southwestern agriculture Roth examines agricultural beginnings across the entire Southwest both northern and southern and across culture groups residing there Beyond simply addressing the arrival and widespread adoption of specific cultigens she pays particular attention to human factors such as patterns of production and variability in agricultural developments Her consideration of broad social and environmental dynamics affecting forager diets and adaptive strategies sheds new light on what we know and what we should ask about the transition from foraging to farming **Ancient Pathways, Ancestral Knowledge** Nancy J. Turner,2014-06-01 Volume 1 The History and Practice of Indigenous Plant Knowledge Volume 2 The Place and Meaning of Plants in Indigenous Cultures and Worldviews Nancy Turner has studied Indigenous peoples knowledge of plants and environments in northwestern North America for over forty years In *Ancient Pathways Ancestral Knowledge* she integrates her research into a two volume ethnobotanical tour de force Drawing on information shared by Indigenous botanical experts and collaborators the ethnographic and historical record and from linguistics palaeobotany archaeology phytogeography and other fields Turner weaves together a complex understanding of the traditions of use and management of plant resources in this vast region She follows Indigenous inhabitants over time and through space showing how they actively participated in their environments managed and cultivated valued plant resources and maintained key habitats that supported their dynamic cultures for thousands of years as well as how knowledge was passed on from generation to generation and from one community to another To understand the values and perspectives that have guided Indigenous ethnobotanical knowledge and practices Turner looks beyond the details of individual plant species and their uses to determine the overall patterns and processes of their development application and adaptation Volume 1 presents a historical overview of ethnobotanical knowledge in the region before and after European contact The ways in which Indigenous peoples used and interacted with plants for nutrition technologies and medicine are examined Drawing connections between similarities across languages Turner compares the names of over 250 plant species

in more than fifty Indigenous languages and dialects to demonstrate the prominence of certain plants in various cultures and the sharing of goods and ideas between peoples She also examines the effects that introduced species and colonialism had on the region's Indigenous peoples and their ecologies Volume 2 provides a sweeping account of how Indigenous organizational systems developed to facilitate the harvesting use and cultivation of plants to establish economic connections across linguistic and cultural borders and to preserve and manage resources and habitats Turner describes the worldviews and philosophies that emerged from the interactions between peoples and plants and how these understandings are expressed through cultures stories and narratives Finally she explores the ways in which botanical and ecological knowledge can be and are being maintained as living adaptive systems that promote healthy cultures environments and indigenous plant populations Ancient Pathways Ancestral Knowledge both challenges and contributes to existing knowledge of Indigenous peoples land stewardship while preserving information that might otherwise have been lost Providing new and captivating insights into the anthropogenic systems of northwestern North America it will stand as an authoritative reference work and contribute to a fuller understanding of the interactions between cultures and ecological systems Plants, People, and Places Nancy J. Turner, 2020-08-20 For millennia plants and their habitats have been fundamental to the lives of Indigenous Peoples as sources of food and nutrition medicines and technological materials and central to ceremonial traditions spiritual beliefs narratives and language While the First Peoples of Canada and other parts of the world have developed deep cultural understandings of plants and their environments this knowledge is often underrecognized in debates about land rights and title reconciliation treaty negotiations and traditional territories Plants People and Places argues that the time is long past due to recognize and accommodate Indigenous Peoples relationships with plants and their ecosystems Essays in this volume by leading voices in philosophy Indigenous law and environmental sustainability consider the critical importance of botanical and ecological knowledge to land rights and related legal and government policy planning and decision making in Canada the United States Sweden and New Zealand Analyzing specific cases in which Indigenous Peoples inherent rights to the environment have been denied or restricted this collection promotes future prosperity through more effective and just recognition of the historical use of and care for plants in Indigenous cultures A timely book featuring Indigenous perspectives on reconciliation environmental sustainability and pathways toward ethnoecological restoration Plants People and Places reveals how much there is to learn from the history of human relationships with nature *Decolonizing the Diet* Gideon Mailer, Nicola Hale, 2018-03-22 Decolonizing the Diet challenges the common claim that Native American communities were decimated after 1492 because they lived in Virgin Soils that were biologically distinct from those in the Old World Comparing the European transition from Paleolithic hunting and gathering with Native American subsistence strategies before and after 1492 the book offers a new way of understanding the link between biology ecology and history Synthesizing the latest work in the science of nutrition immunity and evolutionary genetics with cutting edge scholarship on the history of indigenous

North America Decolonizing the Diet highlights a fundamental model of human demographic destruction human populations have been able to recover from mass epidemics within a century whatever their genetic heritage They fail to recover from epidemics when their ability to hunt gather and farm nutritionally dense plants and animals is diminished by war colonization and cultural destruction The history of Native America before and after 1492 clearly shows that biological immunity is contingent on historical context not least in relation to the protection or destruction of long evolved nutritional building blocks that underlie human immunity

A Companion to American Agricultural History R. Douglas Hurt, 2022-05-11

Provides a solid foundation for understanding American agricultural history and offers new directions for research A Companion to American Agricultural History addresses the key aspects of America s complex agricultural past from 8 000 BCE to the first decades of the twenty first century Bringing together more than thirty original essays by both established and emerging scholars this innovative volume presents a succinct and accessible overview of American agricultural history while delivering a state of the art assessment of modern scholarship on a diversity of subjects themes and issues The essays provide readers with starting points for their exploration of American agricultural history whether in general or in regards to a specific topic and highlights the many ways the agricultural history of America is of integral importance to the wider American experience Individual essays trace the origin and development of agricultural politics and policies examine changes in science technology and government regulations offer analytical suggestions for new research areas discuss matters of ethnicity and gender in American agriculture and more This Companion Introduces readers to a uniquely wide range of topics within the study of American agricultural history Provides a narrative summary and a critical examination of field defining works Introduces specific topics within American agricultural history such as agrarian reform agribusiness and agricultural power and production Discusses the impacts of American agriculture on different groups including Native Americans African Americans and European Asian and Latinx immigrants Views the agricultural history of America through new interdisciplinary lenses of race class and the environment Explores depictions of American agriculture in film popular music literature and art A Companion to American Agricultural History is an essential resource for introductory students and general readers seeking a concise overview of the subject and for graduate students and scholars wanting to learn about a particular aspect of American agricultural history
