

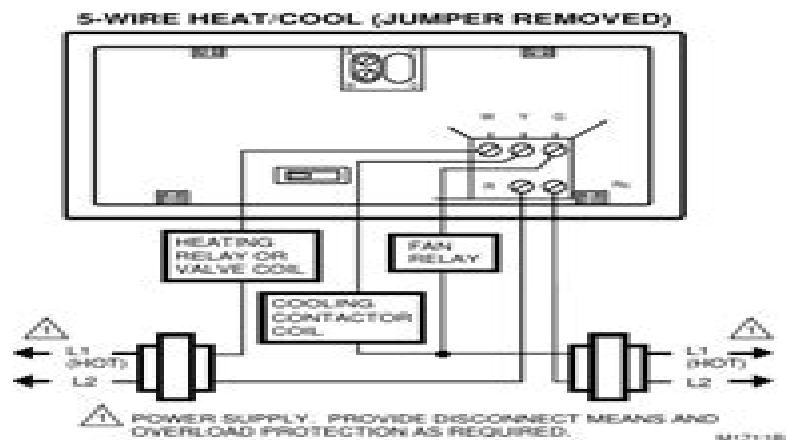

Fig. 8. 5-wire heat/cool application (jumper removed).

Adjust Fan Operation Switch, as Required

The thermostat fan operation switch, labeled FUEL SWITCH (see Fig. 9) is factory set in the F position. This is the correct setting for most systems. If you have an electric heat system, set the switch to E. In systems with the G terminal connected, the E setting turns on the fan immediately with heating or cooling.

Fig. 9. Back view of thermostat.

Adjust System On-Time as Required

The thermostat on-time is factory set for a warm air, gas or oil heating system. If you are installing it on another type of system, the system on-time must be adjusted by changing the setting of screws A and B on the back of the thermostat. Use the heating system table in Fig. 9 as a guide to minimize room temperature swings. The system on-time should be optimized according to the type of system. Setting the screw out one turn means turning the screw approximately 360°, or one complete turn.

NOTE: This thermostat does not have a setting for steam/gravity air. Cycles would not be long enough for accurate temperature control.

NOTE: For condensing furnaces, follow manufacturer instructions.

IMPORTANT

When using a high efficiency furnace such as a 90 percent or greater AFUE (Average Fuel Utilization Efficiency) unit, adjust screw A out one turn and screw B in one turn.

If you want a longer on-time, readjust screws A and B as follows (refer to Table 1 Compatibility Chart):

- Warm Air Furnace—set at the Hot Water setting (A—out one turn, B—in).
- Electric Furnace—leave at the Warm Air Furnace setting (A—in, B—in).

NOTE: This thermostat does not have a setting for steam/gravity air. Cycles would not be long enough for accurate temperature control.

Install Batteries

IMPORTANT

Batteries must be installed for programming and operating the thermostat and heating/cooling system.

1. Use two AA alkaline batteries; nonalkaline batteries will not last as long.
2. Make sure the thermostat is set to the Off position.
3. Use a coin to remove the battery door (see Fig. 10).
4. Install the new batteries as shown, making sure positive and negative terminals are oriented correctly (see Fig. 11).
5. Replace the battery door.

When the batteries are running low, a bAt Lo indicator will flash for one to two months before batteries run out completely. Replace the batteries as soon as possible after the indicator starts flashing. If the batteries are not replaced when the bAt Lo indicator is flashing, the indicator eventually stops flashing. When the batteries are almost completely dead, bAt Lo will stay on without flashing, indicating that the thermostat and heating/cooling system have stopped working. The thermostat will not function after the batteries are completely dead, and the bAt Lo indicator disappears, leaving a completely blank display.

To remove the batteries, press down on the left ends. When the new batteries are installed within 20 to 30 seconds of removing the old ones, the thermostat does not have to be reprogrammed. If the display is blank, the batteries are dead or incorrectly installed and the thermostat has to be reprogrammed. See Owner's Manual for reprogramming instructions.

IMPORTANT

Although the thermostat has a low battery indicator, replace the batteries once a year to prevent the thermostat from losing time and programming due to lack of battery power.
