

Basic Performance Equation

- T – processor time required to execute a program that has been prepared in high-level language
- N – number of actual machine language instructions needed to complete the execution (note: loop)
- S – average number of basic steps needed to execute one machine instruction. Each step completes in one clock cycle
- R – clock rate λ . Note: these are not independent to each other

$$T = \frac{N \times S}{R}$$

- How to improve T?
- Reduce N and S, Increase R, but these affect one another

Pipeline and Superscalar Operation

- Instructions are not necessarily executed one after another.
