Peoples Of The Tundra Northern Siberians In The Post Communist Transition:

Peoples of the Tundra John P. Ziker, 2002-04-11 On ethnographic grounds alone Ziker's book is a unique and valuable contribution. Despite increased fieldwork opportunities for foreigners in the former Soviet Union in recent years, much of Russia and Siberia remains terra incognita to Western scholars except for specialists who know the Russian literature. Ziker's account of the Dolgan and Nganasan peoples of the Ust-Avam community is a fascinating analysis of how people adapt their hunting, fishing, and herding not only to the demanding Arctic environment but also to enormous economic and political adversities created in the wake of the Soviet Union's collapse. In this sense, the book fills a gap in the ethnographic literature on Siberia for Western students and at the same time serves as a microcosm of the devastating changes affecting rural communities and indigenous peoples generally in a disintegrating former superpower that is increasing isolation and a shift to nonmarket survival economies. *Experimenting with Social Norms* Jean Ensminger, Joseph Henrich, 2014-10-22

Questions about the origins of human cooperation have long puzzled and divided scientists. Social norms that foster fair-minded behavior, altruism, and collective action undergird the foundations of large-scale human societies, but we know little about how these norms develop or spread or why the intensity and breadth of human cooperation varies among different populations. What is the connection between social norms that encourage fair dealing and economic growth? How are these social norms related to the emergence of centralized institutions? Informed by a pioneering set of cross-cultural data, *Experimenting with Social Norms* advances our understanding of the evolution of human cooperation and the expansion of complex societies. Editors Jean Ensminger and Joseph Henrich present evidence from an exciting collaboration between anthropologists and economists. Using experimental economics games, researchers examined levels of fairness, cooperation, and norms for punishing those who violate expectations of equality across a diverse swath of societies, from hunter-gatherers in Tanzania to a small town in rural Missouri. These experiments tested individuals' willingness to conduct mutually beneficial transactions with strangers that reap rewards only at the expense of taking a risk on the cooperation of others. The results show a robust relationship between exposure to market economies and social norms that benefit the group over narrow economic self-interest. Levels of fairness and generosity are generally higher among individuals in communities with more integrated markets. Religion also plays a powerful role. Individuals practicing either Islam or Christianity exhibited a stronger sense of fairness, possibly because religions with high moralizing deities equipped with ample powers to reward and punish encourage greater prosociality. The size of the settlement also had an impact. People in larger communities were more willing to punish unfairness compared to those in smaller societies. Taken together, the volume supports the hypothesis that social norms evolved over thousands of years to allow strangers in more complex and large settlements to coexist, trade, and prosper. Innovative and ambitious, *Experimenting with Social Norms* synthesizes an unprecedented analysis of social behavior from an immense range of human societies. The fifteen case studies analyzed in this volume, which include field experiments in Africa
