Food Packaging Cornelia Vasile, Morten Sivertsvik, 2019-04-18 Because of the increasing pressure on both food safety and packaging, food waste, the topic is important both for academics, applied research, industry, and also for environment protection. Different materials such as glass, metals, paper, and paperboards and non-degradable and degradable polymers with versatile properties are attractive for potential uses in food packaging. Food packaging is the largest area of application within the food sector. Only the nanotechnology-enabled products in the food sector account for 50% of the market value, with an annual growth rate of 11.65%. Technological developments are also of great interest. In the food sector, nanotechnology is involved in packaging materials with extremely high gas barriers, antimicrobial properties, and also in nanoencapsulants for the delivery of nutrients, flavors, or aromas, antimicrobial, and antioxidant compounds. Applications of materials including nanomaterials in packaging and food safety are in forms of edible

films polymer nanocomposites as high barrier packaging materials nanocoatings surface biocides silver nanoparticles as potent antimicrobial agents nutrition and nutraceuticals active bioactive packaging intelligent packaging nanosensors and nanomaterial based assays for the detection of food relevant analytes gasses small organic molecules and food borne pathogens and bioplastics Handbook of Benzoxazine Resins Hatsuo Ishida,Tarek Agag,2011-07-13 This handbook provides a wide overview of the field fundamental understanding of the synthetic methods and structure property correlation as well as studies related to applications in a wide range of subjects The handbook also provides ¹H and ¹³C NMR spectra FTIR spectra DSC and TGA thermograms to aid in research activities Additional tables on key NMR and FTIR frequencies unique to benzoxazine heat of polymerization Tg and char yield will greatly aid in the choice of proper benzoxazine for a specific application Provides thorough coverage of the chemistry and applications of benzoxazine resins with an evidence based approach to enable chemists engineers and material scientists to evaluate effectiveness Features spectra which allow researchers to compare results avoid repetition and save time as well as tables on key NMR frequency IR frequency heat of polymerization of many benzoxazine resins to aid them in selection of materials Written by the foremost experts in the field
