After a general introduction to the topic, two foundational chapters present how search tools can cover the Web's content and how search engines achieve this by crawling and processing the found documents. This knowledge builds the foundation for describing how results are ranked and presented. The following three chapters then deal with the economic side of search engines: i.e. Google and the search engine market, search engine optimization (SEO) and the intermingling of organic and sponsored search results. Next, the chapter on search skills presents techniques for improving searches through advanced search interfaces and commands.
