Seasonal Patterns Of Stress Immune Function And Disease:

Seasonal Patterns of Stress, Immune Function, and Disease Randy J. Nelson, Gregory E. Demas, Sabra L. Klein, Lance J. Kriegsfeld, 2002-03-25 This book presents evidence that infection is cyclical with the seasons and that this phenomenon is mirrored in cycles of immune function The book identifies the mechanisms by which immune systems are bolstered to counteract seasonally recurrent stressors such as extreme temperature reductions and food shortages Stress infectious diseases autoimmune diseases and human cancers are examined and the role of hormones such as melatonin and glucocorticoids is considered The book begins with an overview of seasonality biological rhythms and photoperiodism and basic immunology and then discusses seasonal fluctuations in disease prevalence immune function and energetics and endocrinology as they relate to immune function The clinical significance of this issue is also addressed as such seasonal changes may play an important role in the development and treatment of infections This first monograph to examine seasonal immune function from an interdisciplinary perspective will serve practitioners as well as advanced undergraduates and graduate students in biology immunology human and veterinary medicine neuroscience endocrinology and zoology

Stress: Neuroendocrinology and Neurobiology George Fink, 2016-12-15 Stress Neuroendocrinology and Neurobiology Handbook of Stress Series Volume 2 focuses on neuroendocrinology the discipline that deals with the way that the brain controls hormonal secretion and in turn the way that hormones control the brain There have been significant advances in our understanding of neuroendocrine molecular and epigenetic mechanisms especially in the way in which stress induced hormonal and neurochemical changes affect brain plasticity neuronal connectivity and synaptic function The book features the topic of epigenetics and how it enables stress and other external factors to affect genetic transmission and expression without changes in DNA sequence Integrated closely with new behavioral findings and relevance to human disorders the concepts and data in this volume offer the reader cutting edge information on the neuroendocrinology of stress Volume 2 is of prime interest to neuroscientists clinicians researchers academics and graduate students in neuroendocrinology neuroscience biomedicine endocrinology psychology psychiatry and in some areas of the social sciences including stress and its management in the workplace Includes chapters that offer impressive scope with topics addressing the neuroendocrinology and endocrinology of stress Presents articles carefully selected by eminent stress researchers and

prepared by contributors that represent outstanding scholarship in the field Richly illustrated with explanatory figures and tables

Animal Movement Across Scales Lars-Anders Hansson,Susanne Akesson,2014-08-21 Movement dispersal and migration on land in the air and in water are pervading features of animal life They are performed by a huge variety of organisms from the smallest protozoans to the largest whales and can extend over widely different distance scales from the microscopic to global Integrating the study of movement dispersal and migration is crucial for a detailed understanding of the spatial scale of adaptation and for analysing the consequences of landscape and climate change as well as of invasive species This novel book adopts a broad cross taxonomic approach to animal movement across both temporal and spatial scales addressing how and why animals move and in what ways they differ in their locomotion and navigation performance Written by an integrated team of leading researchers the book synthesizes our current knowledge of the genetics of movement including gene flow and local adaptations whilst providing a future perspective on how patterns of animal migration may change over time together with their potential evolutionary consequences Novel technologies for tracking the movement of organisms across scales are also discussed ranging from satellite devices for tracking global migrations to nanotechnology that can follow animals only a millimetre in size Animal Movement Across Scales is particularly suitable for graduate level students taking courses in spatial animal ecology animal migration and movement ecology as well as providing a source of fresh ideas and opinions for those already active within the field It will also be of interest and use to a broader audience of professional biologists interested in animal movements and migrations

Wild Immunology—The Answers Are Out There Gregory M. Woods,Andrew S. Flies,2019-03-20 Go into partnership with nature she does more than half the work and asks none of the fee Martin H Fisher Nature has undertaken an immense amount of work throughout evolution The evolutionary process has provided a power of information that can address key questions such as Which immune molecules and pathways are conserved across species Which molecules and pathways are exploited by pathogens to cause disease What methods can be broadly used or readily adapted for wild immunology How does co infection and exposure to a dynamic environment affect immunity Section 1 addresses these questions through an evolutionary approach Laboratory mice have been instrumental in dissecting the nuances of the immune system The first paper investigates the immunology of wild mice and reviews how evolution and ecology sculpt differences in the immune responses of wild mice and laboratory mice A better understanding of wild immunology is required and sets the scene for the subsequent papers Although nature doesn't ask for a fee it is appropriate that nature is repaid in one form or another The translational theme of the second section incorporates papers that translate wild immunology back to nature But any non human non laboratory mouse research environment is hindered by a lack of research tools hence the underlying theme throughout the second section Physiological resource allocation is carefully balanced according to the most important needs of the body Tissue homeostasis can involve trade offs between energy requirements of the host and compensatory mechanisms to respond to infection The third section comprises

a collection of papers that employ novel strategies to understand how the immune system is compensated under challenging physiological situations Technology has provided substantial advances in understanding the immune system at cellular and molecular levels The specificity of these tools e g monoclonal antibodies often limits the study to a specific species or strain A consequence of similar genetic sequences or cross reactivity is that the technology can be adapted to wild species Section 4 provides two examples of probing wild immunology by adapting technology developed for laboratory species Melatonin S. R. Pandi-Perumal, 2007 Melatonin is a neurohormone produced in the brain by the pineal gland from the amino acid tryptophan Melatonin possesses antioxidant activity and many of its proposed therapeutic or preventive uses are based on this property This book presents a wide spectrum of research on melatonin *Energy and protein metabolism and nutrition in sustainable animal production* James W. Oltjen, E. Kebreab, Hélène Lapiere, 2013-11-04 As world population increases demand for food and particularly animal products is expected to grow substantially Because of limited area for expansion of animal agriculture and growing consumer concern for the environmental impact of animal production gains in animal efficiency will have to be part of the solution This book addresses key issues of how energy and protein are utilized and interact in farm animals from the molecular to the whole animal and even to the herd or group level of organization It contains state of the art research and reviews on several topics of nutrient utilization and metabolism from top scientists worldwide Key issues addressed include energy protein interactions methodology such as in vitro and in vivo techniques regulation including pre natal programming and endocrine regulation modeling and systems biology including a tribute to the late Professor R Lee Baldwin of the University of California Davis a leader in the field products and health of animals tissue metabolism and environmental sustainability in agriculture This book is a valuable resource for researchers students policy makers producers and industry professionals believing that a better understanding of metabolism and nutrition of farm animals is part of the solution *Hormones and Animal Social Behavior* Elizabeth Adkins-Regan, 2013-12-03 Research into the lives of animals in their natural environments has revealed a rich tapestry of complex social relationships and previously unsuspected social and mating systems The evolution of this behavior is increasingly well understood At the same time laboratory scientists have made significant discoveries about how steroid and peptide hormones act on the nervous system to shape behavior An exciting and rapidly progressing hybrid zone has developed in which these two fields are integrated providing a fuller understanding of social behavior and the adaptive functions of hormones This book is a guide to these fascinating connections between animal social behavior and steroid and peptide hormones a synthesis designed to make it easier for graduate students and researchers to appreciate the excitement engage in such integrative thinking and understand the primary literature Throughout Elizabeth Adkins Regan emphasizes concepts and principles hypothesis testing and critical thinking She raises unanswered questions providing an unparalleled source of ideas for future research The chapter sequence is by levels of biological organization beginning with the behavior and hormones of individuals proceeding

to social relationships and systems and from there to development behavioral evolution over relatively short time scales life histories and their evolution and finally evolution over longer time scales The book features studies of a wide variety of wild and domestic vertebrates along with some of the most important invertebrate discoveries **Seasons of Life** Leon Kreitzman, Russell Foster, 2010-08-26 The natural world is full of rhythms How do birds know when to return to their nesting grounds What effect do the seasons have on our wellbeing and how does the season in which we are born affect our subsequent life chances How did humans get the idea that there were seasons 50 000 years ago Seasons of Life explains why the seasons occur the impact of seasonal change and how organisms have evolved to anticipate these changes For although we mask the effects of seasonal changes by warming our homes lighting our nights preserving foods and storing water we cannot hide from them **Biological Timekeeping: Clocks, Rhythms and Behaviour** Vinod Kumar, 2017-02-15 This book is a concise comprehensive and up to date account of fundamental concepts and potential applications of biological timekeeping mechanisms in animals and humans It also discusses significant aspects of the organization and importance of timekeeping mechanisms in both groups Divided into seven sections it addresses important aspects including fundamental concepts animal and human clocks clock interactions clocks and metabolism and immune functions pineal melatonin and timekeeping and clocks photoperiodism and seasonal behaviours The book also focuses on biological clock applications in a 24x7 human society particularly in connection with life style associated disorders like obesity and diabetes It is a valuable resource for advanced undergraduates researchers and professionals engaged in the study of the science of biological timekeeping
