Nuclear Structure and Electroweak Properties from Chiral Effective Field Theory Patrick J. Fasano, 2025-07-26 This thesis presents a consistent application of chiral effective field theory EFT interactions and currents to obtain ab initio results for light nuclei magnetic dipole and Gamow Teller strengths in light nuclei A 17 Recent results have demonstrated the importance of chiral EFT corrections for correctly predicting magnetic dipole and Gamow Teller strengths in nuclei However these studies have not consistently applied the same treatment to these operators as is applied to the interaction In this work it is found that the inclusion of chiral EFT corrections to the magnetic dipole and Gamow Teller operators generally brings the calculated results closer to agreement with experiment However this work also demonstrates that the convergence of the solution to the many body problem still poses substantial difficulties This work has confirmed that the inclusion of chiral EFT corrections is necessary to describe light nuclei while concluding that higher order corrections are necessary in order to
