Quantitative Data Analysis Donald J. Treiman, 2009 *Quantitative Data Analysis* Donald J. Treiman, 2014-01-30 This book is an accessible introduction to quantitative data analysis concentrating on the key issues facing those new to research such as how to decide which statistical procedure is suitable and how to interpret the subsequent results Each chapter includes illustrative examples and a set of exercises that allows readers to test their understanding of the topic The book written for graduate students in the social sciences public health and education offers a practical approach to making sociological sense out of a body of quantitative data The book also will be useful to more experienced researchers who need a readily accessible handbook on quantitative methods The author has posted stata files updates and data sets at his website http://tinyurl.com/Treiman_stata_files_data_sets

Handbook of Causal Analysis for Social Research Stephen L. Morgan, 2013-04-22 What constitutes a causal explanation and must an explanation be causal What warrants a causal inference as opposed to a descriptive regularity What techniques are available to detect when causal effects are present and when can these techniques be used to identify the relative importance of these effects What complications do the interactions of individuals create for these techniques When can mixed methods of analysis be used to deepen causal accounts Must causal claims include generative mechanisms and how effective are empirical methods designed to discover them The Handbook of Causal Analysis for Social Research tackles these questions with nineteen chapters from leading scholars in sociology statistics public health computer science and human development

Theory-Based Data Analysis for the Social Sciences Carol S. Aneshensel, 2013 This book presents the elaboration model for the multivariate analysis of observational quantitative data This model entails the systematic introduction of third variables to the analysis of a focal relationship between one independent and one dependent variable to ascertain whether an inference of causality is justified Two complementary strategies are used an exclusionary strategy that rules out alternative explanations such as spuriousness and redundancy with competing theories and an inclusive strategy that connects the focal relationship to a network of other relationships including the hypothesized causal mechanisms linking the focal independent variable to the focal dependent variable The primary emphasis is on the translation of theory into a logical analytic strategy and the interpretation of results The elaboration model is applied with case studies drawn from newly published research that serve as prototypes for aligning theory and the data analytic plan used to test it these studies are drawn from a wide range of substantive topics in the social sciences such as emotion management in the workplace subjective age identification during the transition to adulthood and the relationship between religious and paranormal beliefs The second application of the elaboration model is in the form of original data analysis presented in two Analysis Journals that are integrated throughout the text and implement the full elaboration model Using real data not contrived examples the text provides a step by step guide through the process of integrating theory with data analysis in order to arrive at meaningful answers to research questions
