Quantum Big Bang Cosmology:

Quantum Big Bang Cosmology Stephen Blaha, 2004 A highly technical book describing a new Cosmology for the Beginning of the Universe as well as diverse related topics such as Quantum Field Theory Tachyons Quantum Coordinates and Dimensions Inflationary Cosmology complex space time complex General Relativity the dodecahedral shape of the universe and so on The intended audience is cosmologists physicists mathematical physicists mathematicians and graduate students in those areas **Quantum Big Bang Cosmology** Stephen Blaha, 2003 Quantum Cosmology Martin Bojowald, 2011-07-15 Consequences of quantum gravity on grander scales are expected to be enormous only such a theory can show how black holes really behave and where our universe came from Applications of loop quantum gravity to cosmology have especially by now shed much light on cosmic evolution of a universe in a fundamental microscopic description Modern techniques are explained in this book which demonstrate how the universe could have come from a non singular phase before the big bang how equations for the evolution of structure can be derived but also what fundamental limitations remain to our knowledge of the universe before the big bang The following topics will be covered in this book Hamiltonian cosmology a general basic treatment of isotropy perturbations and their role for observations useful in general cosmology Effective equations an efficient way to evaluate equations of quantum gravity which is also useful in other areas of physics where quantum theory is involved Loop quantization a new formalism for the atomic picture of space time usually presented at a sophisticated mathematical level but evaluated here from an intuitive physical side The book will start with physical motivations rather than mathematical developments which is more common in other expositions of this field All the required mathematical methods will be presented but will not distract the reader from seeing the underlying physics Simple but representative models will be presented first to show the basic features which are then used to work upwards to a general description of quantum gravity and its applications in cosmology This will make the book accessible to a more general physics readership *In Search of the Big Bang* John Gribbin, 1985 **The Universal Kabbalah** Leonora Leet, 2004-09-29 This landmark work by an innovative modern Kabbalist develops a scientific model for kabbalistic cosmology and soul psychology Derived from the kabbalistic diagram of the Tree of Life and the author's own Sabbath Star diagram this universal model encodes the laws of all cosmic manifestation giving a mathematical basis to many aspects of this mystical tradition and providing a new synthesis of science and spirituality that may well write a new chapter to the Kabbalah In Search of the Big Bang John Gribbin, 1986 **God and Time** Gregory E. Ganssle, David M. Woodruff, 2002 This is a collection of previously unpublished essays written by leading philosophers about God's relation to time The essays have been selected to represent current debates between those who believe God to be atemporal and those who do not

Encyclopedia of Cosmology (Routledge Revivals) Norriss S. Hetherington, 2014-04-08 The Encyclopedia of Cosmology first published in 1993 recounts the history philosophical assumptions methodological ambiguities and human

struggles that have influenced the various responses to the basic questions of cosmology through the ages as well as referencing important scientific theories Just as the recognition of social conventions in other cultures can lead to a more productive perspective on our own behaviour so too a study of the cosmologies of other times and places can enable us recognise elements of our own cosmology that might otherwise pass as inevitable developments Apart from modern natural science therefore this volume incorporates brief treatments of Native American Cave Dweller Chinese Egyptian Islamic Megalithic Mesopotamian Greek Medieval and Copernican cosmology leading to an appreciation of cosmology as an intellectual creation not merely a collection of facts It is a valuable reference tool for any student or academic with an interest in the history of science and cosmology specifically

Once Before Time Martin Bojowald, 2010-11-09 In 2000 Martin Bojowald then a twenty seven year old post doc at Pennsylvania State University used a relatively new theory called loop quantum gravity a cunning combination of Einstein's theory of gravity with quantum mechanics to create a simple model of the universe Loop quantum cosmology was born and with it a theory that managed to do something even Einstein's general theory of relativity had failed to do illuminate the very birth of the universe Ever since loop quantum cosmology or LQC has been tantalizing physicists with the idea that our universe could conceivably have emerged from the collapse of a previous one Now the theory is poised to formulate hypotheses we can actually test If they are verified the big bang will give way to the big bounce Instead of a universe that emerged from a point of infinite density we will have one that recycles possibly through an eternal series of expansions and contractions with no beginning and no end Bojowald's major realization was that unlike general relativity the physics of LQC do not break down at the big bang The greatest mystery surrounding the origin of the universe is what cosmologists call the big bang singularity the point at the beginning of the universe prior to the existence of space and time when gravity along with the temperature and density of the universe becomes infinite The equations of general relativity can't cope with such infinities and as a result big bang theory has never been able to give any explanation for the initial condition of our universe succeeding only in describing and explaining the evolution of the universe from that instant onward Bojowald's theory takes us right up to the first moment of the universe and then back even before the big bang itself

What Caused the Big Bang? Rem Blanchard Edwards, 2001 This book critically explores answers to the big question What produced our universe around fifteen billion years ago in a Big Bang It critiques contemporary atheistic cosmologies incl Steady State Oscillationism Big Fizz that affirm the eternity self sufficiency of the universe without God It defends and revises Process Theology and arguments for God's existence from the universe's life supporting order contingent existence
