Photoelectron Statistics B. Saleh, 2013-06-05 With the recent great expansion in optics and laser applications several new areas of research have emerged among which are the theory of coherence photon statistics speckle phenomenon statistical optics atmospheric propagation optical communications and light beating and photon correlation spectroscopy A factor common to these overlapping subjects is their basic dependence on the treatment of light as a randomly fluctuating excitation Moreover they all necessitate a thorough understanding of the phenomenon of light detection and the additional randomness it introduces My objective in writing this book is to provide a unified and general presentation of a basic theoretical background central to these areas This book has a threefold purpose to present a systematic treatment of the statistical properties of optical fields to develop methods for determining the statistics of the photoelectron events that are generated when such fields are intercepted by photodetectors and to examine methods of estimating unknown field parameters from measurements of the photoelectron events Emphasis is placed on the photoelectron measurements that yield information pertinent to spectroscopy and optical communication Although some books that treat the theory of coherence and the statistical properties of light are available the vast body of information central to problems of photoelectron statistics and its applications is scattered in various professional journals and conference proceedings

Optimization and Control of Bilinear Systems Panos M. Pardalos, Vitaliy A. Yatsenko, 2010-03-14 The present book is based on results of scientific investigations and on the materials of special courses offered for graduate and undergraduate students The purpose of this book is to acquaint the reader with the developments in bilinear systems theory and its applications Particular attention is paid to control of open physical processes functioning in a nonequilibrium mode The text consists of eight chapters Chapter 1 is concerned with the problems of systems analysis of

bilinear processes Chapter 2 solves the problem of optimal control of bilinear systems on the basis of differential geometry methods Chapter 3 deals with the progress made in an adaptive estimation technique Chapter 4 is devoted to the application of the Yang Mills fields to investigation of nonlinear control problems Chapter 5 considers intelligent sensors used to examine weak signals This chapter also describes and analyzes bilinear models of intelligent sensing elements Chapter 6 illustrates control problems of a quantum system Chapter 7 discusses the problems of control and identification in systems with chaotic dynamics Finally Chapter 8 examines the controlled processes running in biomolecular systems This book is directed to students postgraduate students and specialists engaged in the fields of control of physical processes quantum and molecular computing biophysics and physical information science Spectral Theory of Families of Self-Adjoint Operators Anatolii M.
