

4. Return to exercise 2, using, this time, the Fourier transform.

a) Write the eigenvalue equation of  $H$  and the Fourier transform of this equation. Deduce directly from this the expression for  $\tilde{\varphi}(p)$ , the Fourier transform of  $\varphi(x)$ , in terms of  $p$ ,  $E$ ,  $\alpha$  and  $\varphi(0)$ . Then show that only one value of  $E$ , a negative one, is possible. Only the bound state of the particle, and not the ones in which it propagates, is found by this method; why? Then calculate  $\varphi(x)$  and show that one can find in this way all the results of exercise 2.

b) The average kinetic energy of the particle can be written (*cf.* chap. III):

$$E_k = \frac{1}{2m} \int_{-\infty}^{+\infty} p^2 |\tilde{\varphi}(p)|^2 dp$$

87

#### COMPLEMENT K.

Show that, when  $\tilde{\varphi}(p)$  is a "sufficiently smooth" function, we also have:

$$E_k = -\frac{\hbar^2}{2m} \int_{-\infty}^{+\infty} \varphi^*(x) \frac{d^2\varphi}{dx^2} dx$$

These formulas enable us to obtain, in two different ways, the energy  $E_k$  for a particle in the bound state calculated in a). What result is obtained? Note that, in this case,  $\varphi(x)$  is not "regular" at  $x = 0$ , where its derivative is discontinuous. It is then necessary to differentiate  $\varphi(x)$  in the sense of distributions, which introduces a contribution of the point  $x = 0$  to the average value we are looking for. Interpret this contribution physically: consider a square well, centered at  $x = 0$ , whose width  $a$  approaches 0 and whose depth  $V_0$  approaches infinity (so that  $aV_0 = \alpha$ ), and study the behavior of the wave function in this well.

**Elementary Quantum Mechanics: With Problems And Solutions** Stephen Wiggins, 2025-02-25 The impact of quantum mechanics on our day to day life is growing at an exponential rate of which most people are unaware For example the toaster is a prime example of a quantum mechanical device While quantum mechanics arose as a subject in physics quantum mechanical thinking has had and continues to have a broad impact on mathematics For example operator theory as we know it today would not exist without von Neumann s effort to put quantum mechanics on a solid mathematical foundation This book is defined for undergraduate students of mathematics to obtain an introduction to quantum mechanical ideas and the associated mathematics without requiring an extensive background in physics This book is focused around the following topics 1 The Mathematical Structure of Quantum Mechanics We develop the main mathematical structure of quantum theory in the setting of the accepted postulates of quantum mechanics Dirac s bra ket notation for the required linear algebra aspects will be utilized as well as the mathematical and physical implications arising from the mathematical aspects of self adjoint linear operators with emphasis on the finite dimensional setting 2 Dynamics of a Quantum Particle We introduce the Schrodinger equation and discuss its physical meaning and mathematical structure The required partial differential equations theory is elementary and will be developed from scratch 3 Measurement Time Evolution Uncertainty and the Harmonic Oscillator This builds on the previously developed mathematics and culminates with a detailed discussion of the quantum mechanical workhorse example the harmonic oscillator 4 Quantum Mechanics of Angular Momentum Most of the book is developed in the context of the relatively simple one dimensional quantum systems This topic goes into three dimensions and illustrates how very interesting mathematics can yield novel physical explanations that are unobtainable with classical methods 5 The Postulates of Quantum Mechanics Measurement Composite Systems Tensor Products and Entanglement This is the area that most students have heard of quantum entanglement action at a distance and Bell s inequality The mathematics will be at an elementary level except possibly for tensor products which are sadly neglected many linear algebra courses today but which are literally exploding in a variety of current applications Quantum Mechanics, Volume 1 Claude Cohen-Tannoudji, Bernard Diu, Franck Laloe, 2019-12-04 This new edition of the unrivalled textbook introduces the fundamental concepts of quantum mechanics such as waves particles and probability before explaining the postulates of quantum mechanics in detail In the proven didactic manner the textbook then covers the classical scope of introductory quantum mechanics namely simple two level systems the one dimensional harmonic oscillator the quantized angular momentum and particles in a central potential The entire book has been revised to take into account new developments in quantum mechanics curricula The textbook retains its typical style also in the new edition it explains the fundamental concepts in chapters which are elaborated in accompanying complements that provide more detailed

discussions examples and applications The quantum mechanics classic in a new edition written by 1997 Nobel laureate Claude Cohen Tannoudji and his colleagues Bernard Diu and Franck Lalö As easily comprehensible as possible all steps of the physical background and its mathematical representation are spelled out explicitly Comprehensive in addition to the fundamentals themselves the book contains more than 350 worked examples plus exercises Claude Cohen Tannoudji was a researcher at the Kastler Brossel laboratory of the Ecole Normale Sup rieure in Paris where he also studied and received his PhD in 1962 In 1973 he became Professor of atomic and molecular physics at the Coll ge des France His main research interests were optical pumping quantum optics and atom photon interactions In 1997 Claude Cohen Tannoudji together with Steven Chu and William D Phillips was awarded the Nobel Prize in Physics for his research on laser cooling and trapping of neutral atoms Bernard Diu was Professor at the Denis Diderot University Paris VII He was engaged in research at the Laboratory of Theoretical Physics and High Energy where his focus was on strong interactions physics and statistical mechanics Franck Lalö was a researcher at the Kastler Brossel laboratory of the Ecole Normale Sup rieure in Paris His first assignment was with the University of Paris VI before he was appointed to the CNRS the French National Research Center His research was focused on optical pumping statistical mechanics of quantum gases musical acoustics and the foundations of quantum mechanics
