How requirements development could support design of effective and resource-efficient offerings Sara Nilsson, 2017-11-15 What a company offers its customers has to fulfil several different needs desires constraints which can originate from multiple different sources that affect the offering throughout its life cycle All these criteria have to come together and be translated into statements that can support the designer's understanding of the offering's purpose This translation is done through a requirements development process to provide a controlled process to define statements that describe what the offering is supposed to fulfil This research provides insights on key challenges and success factors in requirements development to support the design of effective and resource efficient offerings Namely it identifies crucial sources and aspects to be considered and a requirements development process demonstrating how to overcome identified challenges By getting the requirements right from the beginning sub optimisation and unnecessary time and risks can be avoided The consideration of accurate sources and aspects is considered to be one of the most important factors for the successful design of offerings It is also in the earliest phases of design that is to say requirements development where one has the greatest possibility to affect the environmental impact of the offering What is missing however is sufficient and appropriate support in industry on how to do so The gap between the three areas of effectiveness and resource efficiency design of integrated offerings and requirements development has been investigated Results are based on findings in the literature and in industry identified primarily by qualitative studies In the research 15 different companies have been included through a number of interviews and discussions Key sources and aspects to consider in the requirements development process are identified along with challenges and success factors that can be utilised to overcome the identified challenges This research's final results include an adapted requirements development process that considers the earlier mentioned sources and aspect challenges and success factors Such a requirements development process should support the design of effective and resource efficient offerings
