Cowan, 2019-01-29 Magic Monsters and Make Believe Heroes looks at fantasy film television and participative culture as evidence of our ongoing need for a mythic vision for stories larger than ourselves into which we write ourselves and through which we can become the heroes of our own story Why do we tell and retell the same stories over and over when we know they can't possibly be true Contrary to popular belief it's not because pop culture has run out of good ideas Rather it is precisely because these stories are so fantastic some resonating so deeply that we elevate them to the status of religion Illuminating everything from Buffy the Vampire Slayer to Dungeons and Dragons and from Drunken Master

Fallows, 2006-11-22

Pro JSF and Ajax shows you how to leverage the full potential of JavaServer Faces JSF and Ajax This is not an entry level tutorial but a book about building Ajax enabled JSF components for sophisticated enterprise level rich Internet applications Written by JSF experts and verified by established community figures including Adam Winer member of the JSF Expert Group Java Champion Kito D Mann JSFCentral.com and JSF in Action and Matthias Weendorf MyFaces this JSF 5 compatible book provides reliable and groundbreaking JSF components to help you exploit the power of JSF in your Java web applications This book provides a blueprint for building custom JSF user interface components and shows how to leverage the best browser technologies such as Ajax Mozilla XUL and Microsoft HTC to deliver rich Internet applications This book covers standard best practices for behavioral and renderer specific component classes renderers events and event listeners and JSP tag handlers for each It also covers advanced techniques such as dynamic content type negotiation JAR based resource delivery and dynamic render kit selection Foreword Does the world really and truly need another JavaServer Faces book I was fairly well convinced the answer could only be a resounding no After all there's a good half dozen books out in stores today by a

whole host of web luminaries and I've even personally helped as a technical reviewer on half of those. So what more could really be said on the subject? But when I thought about this a bit more it became clear that all of these books only go so far. They'll show you how to use what JSF gives you out of the box, throw you a bone for writing your own components and renderers maybe even a bit more. But none that I've seen get to the heart of why JSF is really and truly cool and important technology; they make JSF look like YAMVCF (Yet Another Model View Controller Framework for HTML) more powerful here and there, easier to use in many places, a bit harder to use in others, but really nothing major. And certainly nothing that takes us beyond the dull basics of building ordinary looking web applications. This book goes a lot further. It'll cover the basics of course and show you how to build components, but then it keeps going on to AJAX, on to HTC, on to XUL, and how you can wrap this alphabet soup up underneath the heart of JSF, its component model, and how you can leverage it to finally develop web applications that don't need radical re-architecting every time the winds of client technologies blow in a different direction. Along the way you'll learn a wide array of open source toolkits that make web magic practical even when you're not a Javascript guru. So heck, I'm convinced. The world does need another JSF book.

Adam Winer, Architect, ADF Faces JSF Expert Group Member and Java Champion
