Online Book Different Modes Existence Univocal:

Thinking the Problematic Oliver Leistert, Isabell Schrickel, 2020-10-08 The notion of the problematic has changed its meaning within the history of power and knowledge since the early 20th century leading up to today's performative neocybernetic fascination with generalized management ideas and technocratic models of science This book explores central scenes conceptual elaborations and practical affiliations of what historically has been called the problem or the problematic By way of considering modes of problematization as modes of inhabitation intervention and transformation the contributions map its current conceptual political uses as well as onto epistemological challenges Thus problematization is positioned as a critical concept that links often in intricate ways several currents from speculative philosophy to the formation of interdisciplinary fields The problematic as it turns out has been the source of change in philosophy and the sciences all along

A World of Many Worlds Marisol de la Cadena, Mario Blaser, 2018-10-25 A World of Many Worlds is a search into the possibilities that may emerge from conversations between indigenous collectives and the study of science's philosophical production The contributors explore how divergent knowledges and practices make worlds They work with difference and sameness recursion divergence political ontology cosmopolitics and relations using them as concepts methods and analytics to open up possibilities for a pluriverse a cosmos composed through divergent political practices that do not need to become the same Contributors Mario Blaser Alberto Corsi Jimenez D borah Danowski Marisol de la Cadena John Law Marianne Lien Isabelle Stengers Marilyn Strathern Helen Verran Eduardo Viveiros de Castro

Affects, Interfaces, Events Bodil Marie Stavning Thomsen, Jette Kofoed, Jonas Fritsch, 2021-03-01 This book engages with how affective encounters are shaped and conditioned by interfacial events Together the chapters explore the implications of this on a micro perceptual and macro relational level through an experimental middling of approaches and examples While broadly departing from a Spinozist and Deleuzian theoretical foundation the book weaves together a compelling number of conceptual and empirical trajectories Always attuned to the implications modulations and tonalities arising in the readings through art journalism bodies an archives data and design Affects Interfaces Events allows for a truly transdisciplinary resonance driven by theory technology and practice

Couplets Brian Massumi, 2021-08-09 In Couplets Brian Massumi presents twenty four essays that represent the full spectrum of his work during the past thirty years Conceived as a companion volume to Parables for the Virtual Couplets addresses the key concepts of Parables from different angles and contextualizes them allowing their stakes to be more fully felt Rather than organizing the essays chronologically or by topic Massumi pairs them into couplets to encourage readers to make connections across conventional subject matter categories to encounter disjunctions and to link different phases in the evolution of his work In his analyses of topics ranging from art affect and architecture to media theory political theory and the philosophy of experience Massumi charts a field on which a family of conceptual problems plays out in ways that bear on the potentials for acting and perceiving the world As an essential guide to Massumi's oeuvre Couplets is both a

primer for his new readers and a supplemental resource for those already engaged with his thought Opening digital fabrication: transforming TechKnowledgies Schneider, Christoph, 2018-09-05 This study analyses the field of open digital fabrication where novel digital capabilities and hopes for social transformation have merged to form arrangements that seek to democratise knowledge and technology through collaboration Through qualitative social science the study analyses FabLabs and open source technologies and the respective collective procedures that produce and organise technology and knowledge that redefine the entanglement of our society and its technologies *Steps toward a Philosophy of Engineering* Carl Mitcham, 2019-12-06 The rise of classic Euro American philosophy of technology in the 1950s originally emphasized the importance of technologies as material entities and their mediating influence within human experience Recent decades however have witnessed a subtle shift toward reflection on the activity from which these distinctly modern artifacts emerge and through which they are engaged and managed that is on engineering What is engineering What is the meaning of engineering How is engineering related to other aspects of human existence Such basic questions readily engage all major branches of philosophy ontology epistemology ethics political philosophy and aesthetics although not always to the same degree The historico philosophical and critical reflections collected here record a series of halting steps to think through engineering and the engineered way of life that we all increasingly live in what has been called the Anthropocene The aim is not to promote an ideology for engineering but to stimulate deeper reflection among engineers and non engineers alike about some basic challenges of our engineered and engineering lifeworld Technólogos in Being Wolfgang Ernst, 2021-05-06 Wolfgang Ernst s new work Technol gos in Being in its explicit media scientific approach aligns with the politics of the thinking media series to publish innovative works that advance media studies towards the new sciences Ernst s invites readers to re adjust their ideas of Media Studies the conviction that an extended understanding of medium needs to include a concept of materiality that focuses on non human agencies as well The book grounds media analysis radically in the technological apparatuses relays transistors hard and software to precisely locate the scenes operations and frictions where reasoning logos and informable matter interfere Modernity and Technology Søren Riis, 2024-12-13 The late Bruno Latour has come a long way since he claimed that we have never been modern and analyzed the hole in the ozone layer from an armchair From his initial analysis of modernity Latour evolved to confront the detrimental impact of modern civilization on the Earth This book contends that Latour s early and later works can be connected to the philosophy of Martin Heidegger so as to render a profound understanding of the intricate relationship between modernity and technology in our era Reconsidered in tandem these thinkers can become essential guides to help us circumvent some of the fundamental human and environmental tragedies of our time While both Latour and Heidegger illuminate the perils of our epoch they also offer a beacon of hope Through their alternative examination of human existence technology and the world around us they inspire us to envision paths toward overcoming the challenges of modernity In their interconnected philosophies lies the potential for

rediscovering hope despite the pressing dangers of our age This book calls for theoretical fieldwork and a parallel reassessment of these intellectual giants and urges us to draw upon their insights in order to confront and transcend the dilemmas of our modern world

The Care of Things Jerome Denis, David Pontille, 2025-01-22 What does a coffee machine a car road signs a smartphone a cathedral a work of art a satellite a bicycle a washing machine a bridge a watch a computer the body of a prominent politician and a tractor have in common Pretty much nothing except for the fact that no matter how small large important or insignificant something is it rarely survives without being cared for Every object eventually experiences wear and tear it deteriorates stops working or breaks down But are we giving the care of things the recognition it deserves A counterpoint to our modern obsession with innovation but less striking than the one off act of restoration the delicate act of making things last rarely attracts our attention This book disrupts our dominant narratives by putting those individuals skilled in the art of maintenance front and centre J r me Denis and David Pontille shine a spotlight on the subtle aspects of caring for things tracing the stories of those involved and with them the ethical challenges raised and political lessons learned These people demonstrate a sensitivity and attentiveness to fragility they encourage us to cultivate a material diplomacy in which wear is accepted and our relation to things becomes a matter of negotiation and compromise a far cry from the frenetic rhythm of planned obsolescence inherent in hyper consumerism Maintenance demarcates the contours of a world in which we have relinquished the human longing for unlimited power and technological autonomy a world where our attachment to things is more profound than we ever imagined

The Theory of Educational Technology Rupert Wegerif, Louis Major, 2023-12-22 Educational technology is controversial some see it as essential to providing free global learning others view it as a dangerous distraction that undermines good education In both instances most theories that have previously been applied to educational technology do not account for the distinctive nature and vast potential of technology This book addresses this issue exploring how education has been bound up with technology from the beginning and recognising that educational aims have already been shaped by technologies Offering a dialogic theory of educational technology Rupert Wegerif and Louis Major respond to contemporary challenges to education within this book including but not limited to climate change misinformation on the internet and the impact of Artificial Intelligence Chapters introduce discuss and contextualise key theories and illustrate through case studies their uses within a diverse range of educational contexts spanning from primary education to adult lifelong learning Each chapter also concludes with a short summary demonstrating how these theories translate to practical implications for design A fascinating response to current developments in educational technology this is a crucial read for all involved in creating researching or making decisions about the use of technologies within educational contexts
