Leading the Web in Concurrent Engineering Parisa Ghodous, Rose Dieng-Kuntz, Geilson Loureiro, 2006 Contains papers on the advances in Concurrent Engineering research and applications This book focuses on

developing methodologies techniques and tools based on Web technologies required to support the key objectives of Concurrent Engineering *Explorations in Automatic Thesaurus Discovery* Gregory Grefenstette, 2012-12-06 *Explorations in Automatic Thesaurus Discovery* presents an automated method for creating a first draft thesaurus from raw text. It describes natural processing steps of tokenization, surface syntactic analysis, and syntactic attribute extraction. From these attributes, word and term similarity is calculated, and a thesaurus is created showing important common terms and their relation to each other, common verb-noun pairings, common expressions, and word family members. The techniques are tested on twenty different corpora ranging from baseball newsgroups, assassination archives, medical X-ray reports, abstracts on AIDS, to encyclopedia articles on animals, even on the text of the book itself. The corpora range from 40,000 to 6 million characters of text, and results are presented for each in the Appendix. The methods described in the book have undergone extensive evaluation. Their time and space complexity are shown to be modest. The results are shown to converge to a stable state as the corpus grows. The similarities calculated are compared to those produced by psychological testing. A method of evaluation using Artificial Synonyms is tested. Gold Standards evaluation shows that techniques significantly outperform non-linguistic based techniques for the most important words in corpora. *Explorations in Automatic Thesaurus Discovery* includes applications to the fields of information retrieval, using established testbeds, existing thesaural enrichment, semantic analysis. Also included are applications showing how to create, implement, and test a first draft thesaurus. *Enterprise Search* Martin White, 2015-10-13 Is your organization rapidly accumulating more information than you know how to manage? This updated edition helps you create an enterprise search solution based on more than just technology. Author Martin White shows you how to plan and implement a managed search environment that meets the needs of your business and your employees. Learn why it's vital to have a dedicated staff manage your search technology and support your users. *Human-computer Interaction, INTERACT '03* Matthias Rauterberg, Marino Menozzi, Janet Wesson, 2003 This work brings together papers written by researchers and practitioners actively working in the field of human-computer interaction. It should be of use to students who study information technology and computer sciences, and to professional designers who are interested in User Interface design. **CMMR 2004** Uffe Wiil, 2005-02-14 This book constitutes the thoroughly refereed post-proceedings of the International Computer Music Modeling and Retrieval Symposium CMMR 2004, held in Esbjerg, Denmark, in May 2004. The 26 revised full papers presented were carefully selected during two rounds of reviewing and improvement. Due to the interdisciplinary nature of the area, the papers address a broad variety of topics. The papers are organized in topical sections on pitch and melody detection, rhythm, tempo, and beat, music generation and knowledge, music performance, rendering, and interfaces, music scores and synchronization, synthesis, timbre, and musical playing, music representation and retrieval, and music analysis.
