Lichens to Biomonitor the Environment Vertika Shukla, D.K. Upreti, Rajesh Bajpai, 2013-08-23 The book embodies the detailed account about unique symbionts i e LICHENS in ecosystem monitoring The first chapter deals with unique characteristics features of lichens which facilitate their survival in extreme climates and makes them an ideal organism for ecosystem monitoring Biosynthesis of secondary metabolites are known to protect lichens against increasing environmental stresses therefore second chapter provides insight into various chromatographic and modern spectroscopic techniques involved in separation and

characterization of lichen substances The third chapter elaborates the criteria for selection of biomonitoring species and characters of host plant that influences lichen diversity and details about different lichen species utilized for biomonitoring One can retrieve preliminary information about the air quality based on the lichen community structure and distribution of bioindicator species as lichen communities indicator species provides valuable information about the natural anthropogenic induced changes in the microclimate and land use changes due to human activity Therefore for identification of species a key to genera and species provides concise information to identify the lichen species based on their morphological and anatomical characters and chemicals present Keys provided in Chapter 4 will help the beginners to identify some common lichen species based on the distribution in different climatic zones of India The section also provides comprehensive information about the bioindicator communities and bioindicator species from India Chapter 5 provides the details of factors affecting the ecosystem natural as well as anthropogenic disturbances and role of lichens in ecosystem monitoring in India has been discussed in detail Chapter 6 discusses the need and utility of indicator species especially lichen biomonitoring data in sustainable forest management and conservation The content about lichens in biomonitoring will be a valuable resource for researchers from different fields and will provide an essential reference for people interested in lichens and its role in ecosystem monitoring The book will also hopefully popularize lichenological studies in India and will generate more active participation of lichen biomonitoring studies in management and conservation of natural resources in India

Recent Advances in Lichenology Dalip Kumar Upreti, Pradeep K. Divakar, Vertika Shukla, Rajesh Bajpai, 2014-12-18 This book discusses in detail molecular mycobiont culture biomonitoring and bioprospection of lichens providing insights into advances in different fields of lichenology by applying modern techniques and approaches and examining how their application has enhanced or changed classical approaches It offers a valuable resource especially for beginners students and researchers from different academic backgrounds interested in the study of lichens In recent years the introduction of modern analytical techniques and approaches has significantly improved our understanding of the environment including lichens Lichens are unique organisms which possess untapped potential as effective and reliable bioindicators sources of therapeutic phytochemicals and as excellent extremophiles The unique and peculiar characteristics of lichens underline the need for a multidimensional approach to explore their potential in various fields of environment science botany and chemistry Modern techniques especially molecular techniques have greatly enriched the field of lichen taxonomy and its position in the plant kingdom revealing little known species and exploring their evolutionary history while multivariate analysis and GIS approaches have established lichens as an ideal and reliable tool for monitoring air pollution Advanced culture techniques have expanded the pharmacological applications of lichens which was formerly restricted due to their small biomass The advent of sophisticated analytical instrumentation has now facilitated the isolation and characterization of lichens bioactive constituents even in lower concentrations as well as the estimation of their stress responses at different levels of pollution As

lichen diversity is adversely affected by increasing air pollution there is a pressing need to develop effective management practices to conserve restore and document lichen diversity

Managing Air Quality and Energy Systems Brian D. Fath, 2020-07-29 Bringing together a wealth of knowledge the Handbook of Environmental Management Second Edition gives a comprehensive overview of environmental problems their sources their assessment and their solutions Through in depth entries and a topical table of contents readers will quickly find answers to questions about pollution and management issues This six volume set is a reimagining of the award winning Encyclopedia of Environmental Management published in 2013 and features insights from more than 500 contributors all experts in their fields The experience evidence methods and models used in studying environmental management is presented here in six stand alone volumes arranged along the major environmental systems Features of the new edition The first handbook that demonstrates the key processes and provisions for enhancing environmental management Addresses new and cutting edge topics on ecosystem services resilience sustainability food energy water nexus socio ecological systems and more Provides an excellent basic knowledge on environmental systems explains how these systems function and offers strategies on how to best manage them Includes the most important problems and solutions facing environmental management today In this second volume Managing Air Quality and Energy Systems the reader is introduced to the general concepts and processes of the atmosphere with its related systems This volume explains how these systems function and provides strategies on how to best manage them It serves as an excellent resource for finding basic knowledge on the atmosphere and includes important problems and solutions that environmental managers face today This book practically demonstrates the key processes methods and models used in studying environmental management

Forest Monitoring Roberto Canullo, Franz Starlinger, Paolo Giordani, 2013-03-16 Among the elements of forest biodiversity vegetation including epiphytes is the foundation of ecosystem functioning and primary production Basic features for harmonized large scale and intensive monitoring of vascular plants cryptogams and epiphytic lichens are presented For the assessment of ground vegetation on the European scale a minimum single scale approach with a common sampling area of 400 m² is suggested to produce sets of presence absence and relative cover data This common frame can accommodate national designs For epiphytic lichens sampling follows a standard procedure for tree selection after stratification by bark type On each tree four vertical grids of five 10 10cm contiguous quadrates are used to record the species occurrence Monitoring parameters and timing of surveys transformation of different abundance scales and the need for continuously updated nomenclature are also discussed Examples of transnational results e g functional groups for both lichen and vascular plants and nitrogen deposition are presented which demonstrate the importance and value of harmonized monitoring data

Environmental and Criminal Geoforensics D. Pirrie, A. Ruffell, L.A. Dawson , 2013-12-05 Geological techniques are widely used in two aspects of serious criminal investigations 1 the search for clandestine burial sites based on near surface geophysics or through the detection of decomposition signals and 2 the

analysis of trace evidence to identify its source location or test the possible association between the trace evidence and a known location of an offence Although geoforensics is used in such investigations world wide there are still considerable gaps in the published literature In addition there is increasing concern regarding the illegal release of wastes either into the atmosphere water courses or on to the land surface and a growing realization that the techniques used in criminal forensics are equally useful in the investigation of environmental crime This book bridges the gap between environmental and criminal geoforensics with conceptual methodological and case study contributions This demonstrates the significant potential that geoforensics holds for investigating and regulatory officers

Lichen Bioindication of Biodiversity, Air Quality, and Climate
Sarah Jovan, 2008 Lichens are highly valued ecological indicators known for their sensitivity to a wide variety of environmental stressors like air quality and climate change This report summarizes baseline results from the U S Department of Agriculture Forest Service Forest Inventory and Analysis FIA Lichen Community Indicator covering the first full cycle of data collection 1998 2001 2003 for Washington Oregon and California During this period FIA conducted 972 surveys of epiphytic macrolichen communities for monitoring both spatial and long term temporal trends in forest health Major research findings are presented with emphasis on lichen biodiversity as well as bioindication of air quality and climate Considerable effort is devoted to mapping geographic patterns and defining lichen indicator species suitable for estimating air quality and climate

Forest Monitoring, 2013-03-16 The demand for comparable long term high quality data on forest ecosystems status and changes is increasing at the international and global level Yet sources for such data are limited and in many cases it is not possible to compare data from different monitoring initiatives across space and time because of methodological differences Apart from technical manuals there is no comprehensive multidisciplinary scientific peer reviewed reference for forest monitoring methods that can serve and support the user community This book provides in a single reference the state of the art of monitoring methods as applied at the international level The book presents scientific concepts and methods that form the

basis of the transnational long term forest monitoring in Europe and looks at other initiatives at the global level Standardized methods that have been developed over two decades in international forest monitoring projects are presented Emphasis is put on trans nationally harmonized methods related data quality issues current achievements and on remaining open questions A comprehensive overview of needs requirements organization and possible outcomes of an integrated monitoring program Tested and quality assured internationally harmonized methodologies based on a complete revision of existing methods carried out in 2009 2011 Connection with monitoring results allows assessment of the potential of the monitoring method
