Modern Physics Jeremy Bernstein, Paul M. Fishbane, Stephen Gasiorowicz, Binxing Shi, 2005 **Reading Popular Physics** Elizabeth Leane, 2007 Elizabeth Leane's *Reading Popular Physics* is a valuable contribution to our understanding of the nature and implications of physics popularizations. Focusing particularly on five bestselling books *A Brief History of Time*, *The First Three Minutes*, *Chaos*, *Complexity*, and *The Dancing Wu Li Masters*, Leane analyzes the textual strategies by which popularizers of science influence the public. Her book offers readers a fresh perspective on this highly visible and influential genre.

Theology and Modern Physics Peter E. Hodgson, 2017-09-08 The new discoveries in physics during the twentieth century have stimulated intense debate about their relevance to age-old theological questions. Views range from those holding that modern physics provides a surer road to God than traditional religions to those who say that physics and theology are incommensurable and so do not relate. At the very least, physics has stimulated renewed theological discussions. In this critical introduction to the science-theology debate, Peter E. Hodgson draws on his experience as a physicist to present the results of modern physics and the theological implications. Written for those with little or no scientific background, Hodgson describes connections between physics, philosophy, and theology and then explains Newtonian physics and Victorian physics, the theories of relativity, astronomy, and quantum mechanics, and distinguishes the actual results of modern physics from speculations. The connections with theology are explored throughout. The concluding section draws discussions together and makes an important new contribution to the debate.

Introduction To Modern Physics: Theoretical Foundations John Dirk Walecka, 2008-07-10 Our understanding of the physical world was revolutionized in the twentieth century, the era of modern physics. This book, aimed at the very best students, presents the foundations and frontiers of today's physics. It focuses on the following topics: quantum mechanics, applications in atomic, nuclear, particle, and condensed matter physics, special relativity, relativistic quantum mechanics, including the Dirac equation and Feynman diagrams, quantum fields, and general relativity. The aim is to cover these topics in sufficient depth such that things make sense to students and they can achieve an elementary working knowledge of them. Many problems are included, a great number of which take dedicated readers just as far as they want to go in modern physics. Although the book is designed so that one can, in principle, read and follow the text without doing any of the problems, the reader is urged to attempt as many of them as possible. Several appendices help bring the reader up to speed on any additional required mathematics. With very few exceptions, the reader should then find the text together with the appendices and problems to be self-contained.

Space and Political Universalism in Early Modern Physics and Philosophy Pablo Bustinduy, 2024-03-05 How did early modern philosophy of space shape the modern concept of political universalism? In this book, Pablo Bustinduy persuasively argues that political universalism emerged from both the developments of Newtonian science and the formulation of the

modern philosophy of the State In the metaphysics of an open empty abstract and absolute space Bustinduy suggests the universalist project of modern politics found its logical model and foundation There the anxiety of a dislocated world was overcome and the ontology of modern physics found a specific political expression that despite being besieged by multiple crises still animates our political imagination By offering a political reading of early modern philosophy of space Space and Political Universalism in Early Modern Physics and Philosophy reveals the connections between the logical development of early modern science the contemporary elaborations of the philosophy of the State and the historical articulations of the Westphalian system early capitalist social formations and the European colonial project In doing so it offers a powerful reflection on how we might detach democracy from the perilous metaphysics of infinite space that has engendered political violence and domination positing space as an emptiness that prevents the closure of the political itself **Modern Physics** Jeremy Bernstein, Paul M. Fishbane, Stephen Gasiorowicz, 2007 Challenging Modern Physics Al Kelly, 2005 Newton's Laws held for 300 years until Einstein developed the special theory of relativity in 1905 Experiments done since then show anomalies in that theory This book starts with a description of the special theory of relativity It is shown that Einstein was not the first to derive the famous equation $E=mc^2$ which has become synonymous with his name Next experimental evidence that cannot be explained by special relativity is given In the light of this evidence the two basic postulates of the special theory of relativity on the behaviour of light are shown to be untenable A new theory universal relativity is developed which conforms to the experimental evidence The movement of a conductor near a pole of a magnet and the movement of that pole near the conductor does not always give the same result It has been claimed that this contradicts relativity theory Experiments described in this book show that it is not special relativity but another basic law of physics that is contradicted Faraday's Law The Big Bang theory of the beginning of the universe is questioned and an alternative proposed The source of much of the mysterious missing dark matter that has been sought for decades by astronomers is located An explanation of the shapes of some galaxies is proffered This book presents an alternative to Einstein's special theory of relativity solves many problems left unanswered by special relativity gives a better fit to many phenomena and experimental data and is more philosophically appealing It is recommended to all people interested in fundamental issues of physics and cosmology Professor Andre Assis Brazil The book treats its subject properly not just as an impersonal set of equations but rather as a developing saga full of human triumph and failure One learns from both experimental results and simple logical argument that all is not well with modern physics Dr Neal Graneau Oxford University U K Irish engineer solves the dark secrets of space Sunday Times U K Einstein got relativity theory wrong Bangkok Post Thailand Modern Cosmology Scott Dodelson, 2003-03-13 An advanced text for senior undergraduates graduate students and physical scientists in fields outside cosmology This is a self contained book focusing on the linear theory of the evolution of density perturbations in the universe and the anisotropies in the cosmic microwave background **Gospel of the Absurd** Robert Scot Miller, 2017-08-02 Gospel of the Absurd is a project that

originates in the anarchic experiences of a crack cocaine addict who was knocked off his high horse by an experience of Jesus. Having spent years as an enemy of the faith, R. Scot Miller came back to faith with the passion of a new convert infused with a subversive's heart for turning the world upside down. In the process of stumbling every bit as much as he learned to walk in the light, Miller begins to understand that the subversive claims of the gospel of Jesus as the Christ are not only the most meaningful response to the absurdity of the world but that such absurdity demands a community of action that makes the subversive Christ the credible response to a culture and Christendom run amok with power and greed. Gospel of the Absurd is about an ethic informed by an absurd claim, that being the claim that voluntary sacrifice of privilege is the proper response to human brokenness and the systems of domination that have lured the church into apostasy. Miller then explores whether the church, by prioritizing care ethics over legislative or coercive justice, is the salvific experience Jesus is calling us to engage in.
