Modern Spatial Econometrics In Practice:

Modern Spatial Econometrics in Practice Luc Anselin, Sergio Joseph Rey, 2014-12-27 This book is the definitive user's guide to the spatial regression functionality in the software packages GeoDa and GeoDaSpace as well as the spreg module in the PySAL library all developed at the GeoDa Center for Geospatial Analysis and Computation The book provides the techniques to test for and estimate spatial effects in linear regression models addressing both spatial dependence spatial autoregressive models as well as spatial heterogeneity spatial regimes models The book also serves as an introduction and a practical guide to spatial econometrics in that it covers the methodological principles and formal results that underlie the various estimation methods test procedures and model characteristics computed by the software While the classical maximum likelihood estimation is included the book's coverage emphasizes modern techniques based on the principle of generalized method of moments GMM

Spatial Econometrics Harry Kelejian, Gianfranco Piras, 2017-07-20 Spatial Econometrics provides a modern powerful and flexible skillset to early career researchers interested in entering this rapidly expanding discipline It articulates the principles and current practice of modern spatial econometrics and spatial statistics combining rigorous depth of presentation with unusual depth of coverage Introducing and formalizing the principles of and need for models which define spatial interactions the book provides a comprehensive framework for almost every major facet of modern science Subjects covered at length include spatial regression models weighting matrices estimation procedures and the complications associated with their use The work particularly focuses on models of uncertainty and estimation under various complications relating to model specifications data problems tests of hypotheses along with systems and panel data extensions which are covered in exhaustive detail Extensions discussing pre test procedures and Bayesian methodologies are provided at length Throughout direct applications of spatial models are described in detail with copious illustrative empirical examples demonstrating how readers might implement spatial analysis in research projects Designed as a textbook and reference companion every chapter concludes with a set of questions for formal or self study Finally the book includes extensive supplementing information in a large sample theory in the R programming language that supports early career econometricians interested in the implementation of statistical procedures covered Combines advanced theoretical foundations with cutting edge computational developments in R Builds from solid foundations to more sophisticated extensions that are intended to jumpstart research careers in spatial econometrics Written by two of the most accomplished and extensively published econometricians working in the discipline Describes fundamental principles intuitively but without sacrificing rigor Provides empirical illustrations for many spatial methods across diverse field Emphasizes a modern treatment of the field using the generalized method of moments GMM approach Explores sophisticated modern research methodologies including pre test procedures and Bayesian data analysis

Spatial Analysis Methods and Practice

George Grekousis, 2020-06-11 This is an introductory textbook on spatial analysis and spatial statistics through GIS Each

chapter presents methods and metrics explains how to interpret results and provides worked examples Topics include describing and mapping data through exploratory spatial data analysis analyzing geographic distributions and point patterns spatial autocorrelation spatial clustering geographically weighted regression and OLS regression and spatial econometrics The worked examples link theory to practice through a single real world case study with software and illustrated guidance Exercises are solved twice first through ArcGIS and then GeoDa Through a simple methodological framework the book describes the dataset explores spatial relations and associations and builds models Results are critically interpreted and the advantages and pitfalls of using various spatial analysis methods are discussed This is a valuable resource for graduate students and researchers analyzing geospatial data through a spatial analysis lens including those using GIS in the environmental sciences geography and social sciences

Spatial Analysis Using Big Data Yoshiki Yamagata,Hajime Seya,2019-11-03 Spatial Analysis Using Big Data Methods and Urban Applications helps readers understand the most powerful state of the art spatial econometric methods focusing particularly on urban research problems The methods represent a cluster of potentially transformational socio economic modeling tools that allow researchers to capture real time and high resolution information to potentially reveal new socioeconomic dynamics within urban populations Each method written by leading exponents of the discipline uses real time urban big data to solve research problems in spatial science Urban applications of these methods are provided in unsurpassed depth with chapters on surface temperature mapping view value analysis community clustering and spatial social networks among many others Reviews some of the most powerful and challenging modern methods to study big data problems in spatial science Provides computer codes written in R MATLAB and Python to help implement methods Applies these methods to common problems observed in urban and regional economics

New Directions in Spatial Econometrics Luc Anselin,Raymond Florax,2012-12-06 The field of spatial econometrics which is concerned with statistical and econometric techniques to be used to handle spatial effects in multiregional models was first touched upon in the 1950s It was given its name in the early 70s by Jean Paelinck and has expanded since Its development can be monitored in various monographs that have been published since starting with the seminal work by Andrew Cliff and Keith Ord Also the wide array of journals in which contributions to spatial econometrics have been published shows that the relevance of the field is not restricted to regional science but extends to geography spatial statistics biology psychology political science and other social sciences This volume contains a collection of papers that were presented at special sessions on spatial econometrics organized in the context of the European and North American conferences of the Regional Science Association International that took place in Louvain la Neuve August 25 28 1992 and in Houston November 11 14 1993 respectively Apart from these conference papers some contributions were written especially for this volume The central idea of this book is to communicate the state of the art of spatial econometrics and to offer a number of new directions for future research In order to do so the editors sought contributions of leading

scholars currently active in this field **Handbook of Spatial Analysis in the Social Sciences** Sergio J. Rey, Rachel S. Franklin, 2022-11-18 Providing an authoritative assessment of the current landscape of spatial analysis in the social sciences this cutting edge Handbook covers the full range of standard and emerging methods across the social science domain areas in which these methods are typically applied Accessible and comprehensive it expertly answers the key questions regarding the dynamic intersection of spatial analysis and the social sciences **Handbook of Geospatial Artificial Intelligence** Song Gao, Yingjie Hu, Wenwen Li, 2023-12-29 This comprehensive handbook covers Geospatial Artificial Intelligence GeoAI which is the integration of geospatial studies and AI machine deep learning and knowledge graph technologies It explains key fundamental concepts methods models and technologies of GeoAI and discusses the recent advances research tools and applications that range from environmental observation and social sensing to natural disaster responses As the first single volume on this fast emerging domain Handbook of Geospatial Artificial Intelligence is an excellent resource for educators students researchers and practitioners utilizing GeoAI in fields such as information science environment and natural resources geosciences and geography Features Provides systematic introductions and discussions of GeoAI theory methods technologies applications and future perspectives Covers a wide range of GeoAI applications and case studies in practice Offers supplementary materials such as data programming code tools and case studies Discusses the recent developments of GeoAI methods and tools Includes contributions written by top experts in cutting edge GeoAI topics This book is intended for upper level undergraduate and graduate students from different disciplines and those taking GIS courses in geography or computer sciences as well as software engineers geospatial industry engineers GIS professionals in non governmental organizations and federal state agencies who use GIS and want to learn more about GeoAI advances and applications

Advances in Spatial Econometrics Luc Anselin, Raymond Florax, Sergio J. Rey, 2013-03-09 The volume on New Directions in Spatial Econometrics appeared in 1995 as one of the first in the then new Springer series on Advances in Spatial Sciences It very quickly became evident that the book satisfied a pent up demand for a collection of advanced papers dealing with the methodology and application of spatial econometrics This emerging subfield of applied econometrics focuses on the incorporation of location and spatial interaction in the specification estimation and diagnostic testing of regression models The current effort is a follow up to the New Directions volume Even though the number of empirical and theoretical journal articles dealing with various aspects of spatial econometrics has grown tremendously in the recent past the need remained to bring together an advanced collection on methodology tools and applications This volume contains several papers that were presented at special sessions on spatial econometrics organized as part of a number of conferences of the Regional Science Association International In addition a few papers were invited for submission All papers were refereed The focus in the volume reflects the advances made in the field in recent years **Spatial Econometric Interaction Modelling** Roberto Patuelli, Giuseppe Arbia, 2016-07-25 This contributed volume applies spatial and space time econometric methods to

spatial interaction modeling The first part of the book addresses general cutting edge methodological questions in spatial econometric interaction modeling which concern aspects such as coefficient interpretation constrained estimation and scale effects The second part deals with technical solutions to particular estimation issues such as intraregional flows Bayesian PPML and VAR estimation The final part presents a number of empirical applications ranging from interregional tourism competition and domestic trade to space time migration modeling and residential relocation
