Macro Policy Lessons for a Sound Design of Fiscal

Decentralization International Monetary Fund. Fiscal Affairs Dept., 2009-07-27 Fiscal decentralization has been and remains high on the policy agenda of many countries It is mainly driven by political pressures which tend to be especially evident in countries with multiple ethnicities and or wide regional disparities in incomes or resource endowments More generally decentralization pressures frequently reflect a desire for more participatory government and greater voice of local constituents in the allocation of budgetary resources Regardless of its motivation fiscal decentralization can have important macroeconomic implications Therefore Fund advice to member countries whether in the context of surveillance program design or technical assistance has often focused on the design and implementation of intergovernmental fiscal arrangements This paper distills the main lessons from the Fund's engagement with member countries in this area drawing in particular but not exclusively on technical assistance TA provided by the Fiscal Affairs Department FAD to ten countries which are broadly representative of the range of members that have requested assistance in this area

Institutional Elements of

Tax Design and Reform John McLaren, 2003 *Design and Reform of Taxation Policy* P. Galeotti, Massimo Marrelli, 2013-03-09 G Galeotti and M Marrelli Università di Perugia Università di Napoli 1 The economic analysis of optimal taxation has permitted considerable steps to be taken towards the understanding of a number of problems the appropriate degree of progression the balance between different taxes the equity efficiency trade off etc Though at times considered as abstract and of little use in policy design the issues it addresses are real ones and very much on the agenda of many countries As usual in scientific debate criticisms have contributed to the correct understanding of the theoretical problems

involved and made clear that at the present state of the art definitive conclusions may be premature A first well taken criticism addresses the assumption underlying optimal taxation models of a competitive economy with perfect information on the part of individual agents and full market clearing Once we leave the Arrow Debreu world it is no longer necessarily the case that taxes and transfers introduce distortions on otherwise efficient allocations *Tax by Design for the Netherlands* Sijbren Cnossen,Bas Jacobs,2022 This book provides evidence based analyses of the Dutch tax system s shortcomings as well as detailed proposals for reform **Social Design** Walter Trockel,2019-05-30 This book contains invited essays in memory of Leonid Hurwicz spanning a large area of economic social and other sciences where the implementation or enforcement of institutions and rules requires the design of effective mechanisms The foundations of these articles are set by social choice concepts game theory Nash Bayesian and Walrasian equilibria complete and incomplete information Besides in depth treatments of well established parts of mechanism and implementation theory contributions on novel directions deal for instance with a quantum approach to game and decision making under uncertainty digitalization and the design of block chain for trading The outstanding competence and reputation of the authors reflect the appreciation of the fundamental contributions and the lasting admiration of the personality and the work of Leonid Hurwicz
