Molecular Complexes In Earth's Planetary, Cometary And Interstellar Atmospheres:

Molecular Complexes in Earth's Planetary, Cometary and Interstellar Atmospheres Andrei A. Vigasin, Zdenek Slanina, 1998 This book introduces systematically the concept of weakly bound complexes into the broad field of atmospheric sciences To fill up the gap between our rapidly expanding knowledge of the individual properties of Van der Waals and hydrogen bonded molecules and our understanding of their role in the atmospheric processes an ensemble of related topics are covered by a team of expert co authors The general properties of the weakly bound molecular complexes or clusters are discussed as well as their distribution in the planetary atmospheres Collision induced and dimeric absorption and emission are considered in the context of atmospheric spectroscopy The advanced experimental techniques which enable us to study the spectroscopic features of molecular complexes in the gas phase or which are adsorbed are reviewed The role of molecular complexes in the cometary atmosphere the Earth mesosphere and the atmospheres of the giant planets and some of their satellites are also discussed in detail [Molecular Complexes In Earth's, Planetary Cometary And Interstellar Atmospheres](#) Zdenek Slanina, Andrei A Vigasin, 1998-07-04 This book introduces systematically the concept of weakly bound complexes into the broad field of atmospheric sciences To fill up the gap between our rapidly expanding knowledge of the individual properties of Van der Waals and hydrogen bonded molecules and our understanding of their role in the atmospheric processes an ensemble of related topics are covered by a team of expert co authors The general properties of the weakly bound molecular complexes or clusters are discussed as well as their distribution in the planetary atmospheres Collision induced and dimeric absorption and emission are considered in the context of atmospheric spectroscopy The advanced experimental techniques which enable us to study the spectroscopic features of molecular complexes in the gas phase or which are adsorbed are reviewed The role of molecular complexes in the cometary atmosphere the Earth mesosphere and the atmospheres of the giant planets and some of their satellites are also discussed in detail

Types and Properties of Water - Volume I Martin Gaykovich Khublaryan, 2009-06-30 Types and Properties of Water in two volumes is a component of Encyclopedia of Water Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias These volumes deal with different parts of the hydrosphere and features of water as substance in its three phases Natural water is one of the most important substances for the maintenance of life on our planet The main part of the Earth's water is concentrated in the hydrosphere oceans lakes streams underground water and in the cryosphere all the snow and ice The atmosphere and living organisms also contain water but in minor quantities as compared to the whole hydrosphere Several types of water are in the Nature atmospheric water water in oceans seas coastal zones and estuaries in rivers reservoirs

lakes and wetlands groundwater including soil waters glaciers icebergs and ground ice permafrost This set of volumes is designed to be a very authoritative reference for state of the art knowledge on the various aspects such as Characteristics of Water and Water Bodies in the Natural Environment Properties of Atmospheric Water Properties of Oceans Inland Seas Coastal Zones and Estuaries Properties of Rivers Streams Lakes and Wetlands Properties of Soil Water and Groundwater Properties Of Glacial Iceberg And Permafrost Water These two volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs

Weakly Interacting Molecular Pairs: Unconventional Absorbers of Radiation in the Atmosphere Claude Camy-Peyret, Andrei A. Vigasin, 2012-12-06 The Advanced Research Workshop entitled Weakly Interacting Molecular Pairs Unconventional Absorbers of Radiation in the Atmosphere was held in Abbaye de Fontevraud France from April 29 to May 3 2002 The meeting involved 40 researchers from 14 countries The goal of this meeting was to address a problem that the scientific community is aware of for many years Up now however the solution for this problem is far from satisfactory Pair effects are called unconventional in the title of this meeting In specific spectral domains and/or geophysical conditions they are recognized to play a dominant role in the absorption emission properties of the atmosphere Water vapor continuum absorption is among the most prominent examples Permanently improving accuracy of both laboratory studies and field observations requires better knowledge of the spectroscopic features attributable to molecular pairs which may form at equilibrium The Workshop was targeted both to clarify the pending questions and as far as feasible to trace the path to possible answers since the underlying phenomena are yet incompletely understood and since a reliable theory is often not available On the other hand the lack of precise laboratory data on bimolecular absorption is often precluding the construction of reliable theoretical models Ideally the knowledge accumulated in the course of laboratory studies should correlate with the practical demands from those who are carrying out atmospheric field measurements and space observations
