Designing the Dynamic Jane Burry,2013 Who knows more about the performance impact of design changes in real time than the sailor and sail trimmer in an ocean race Performance can be most influential on design decision making when the performance response to design change is experienced in real time In architecture and design dynamic feedback is the computational and analogue design challenge of the hour how to experience within dynamic digital and physical design models as those changes are actually happening So in this book the challenge is first explored by looking beyond the design of the static built infrastructure of the city to the ultimate in reflexive action and high performance design sailboat racing Successful design decision making relies on design team interaction between individuals of very diverse expertise and points of departure generalists and specialists Designing the Dynamic brings together leading researchers from architecture boat design industrial design mathematics aerospace structural engineering and computer science to explore the design and representation of dynamic systems The authors expose diverse aspects of the subject ranging from the empirical science and sociology to the deep poetry of designing with dynamic phenomena Major Selling Point This is a cutting edge design book that will be of real interest to those involved in the dynamics of practical super efficient design methods as well as those with an interest in sailing and maximising the efficiency of sails in racing conditions Yachting ,1988-12 **Fast Handling Technique** Frank Bethwaite,2013-05-12 From the author of the bestselling High Performance Sailing and Higher Performance Sailing comes the first scientific analysis of what makes fast sailors fast Eschewing the idea that luck or innate

talent are the keys to success Frank Bethwaite shows how knowledge truly is power Making use of video cameras aligned to GPS read outs to track the fastest racers he meticulously analyses what winners do and how they do it to show the rest of us how to get the best out of a racing craft Frank Bethwaite s previous books were groundbreaking bibles that applied scientific theories to how sails and hulls interact with wind and water to influence boat speed But whilst they applied scientific theories to boat construction they didn t apply science to practical boat handling This book fills that gap and then goes further Budding racers of all levels will welcomethis unique book as a godsend It will inform instruct and enable them toemploy the techniques and timing of the most successful racers and make racingmore competitive for participants and more exciting for those of us watching
