Systems Science and Cybernetics - Volume III Francisco Parra-Luna, The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories

addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatory problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence

Fuzzy Systems Engineering Nadia Nedjah, Luiza de Macedo Mourelle, 2005-05-20 This book is devoted to reporting innovative and significant progress in fuzzy system engineering Given the maturation of fuzzy logic this book is dedicated to exploring the recent breakthroughs in fuzziness and soft computing in favour of intelligent system engineering This monograph presents novel developments of the fuzzy theory as well as interesting applications of the fuzzy logic exploiting the theory to engineer intelligent systems

Computing Principles and Integration for Real-Time Service-Oriented Computing Punit Gupta, Dinesh Kumar Saini, Kashif Zia, 2024-03-22

In recent years soft computing techniques have emerged as a successful tool to understand and analyze the collective behavior of service oriented computing software. Algorithms and mechanisms of self organization of complex natural systems have been used to solve problems particularly in complex systems which are adaptive, ever evolving and distributed in nature across the globe. What fits more perfectly into this scenario other than the rapidly developing era of Fog IoT and Edge computing environment. Service oriented computing can be enhanced with soft computing techniques embedded inside the Cloud, Fog and IoT systems. *Soft Computing Principles and Integration for Real Time Service Oriented Computing* explores soft computing techniques that have wide application in interdisciplinary areas. These soft computing techniques provide an optimal solution to the optimization problem using single or multiple objectives. The book focuses on basic design principles and analysis of soft computing techniques. It discusses how soft computing techniques can be used to improve quality of service in service oriented architectures. The book also covers applications and integration of soft computing techniques with a service oriented computing paradigm. Highlights of the book include:

- A general introduction to soft computing
- An extensive literature study of soft computing techniques and emerging trends
- Soft computing techniques based on the principles of artificial intelligence, fuzzy logic and neural networks
