

for long division.

(3) The use of students own productions and constructions

Students should be asked to 'produce' more concrete things. De Lange(1995) stresses the fact that, by making 'free production', students are forced to reflect on the path they themselves have taken in their learning process and, at the same time, to anticipate its continuation. Free productions can form an essential part of assessment. For example, students may be asked to write an essay, to do an experiment, to collect data and draw conclusions, to design exercises that can be used in a test, or to design a test for other students in the classroom.

(4) The interactive character of the teaching process or interactivity

Interaction between students and between students and teachers is an essential part in RME (de Lange, 1996; Gravenmeijer, 1994). Explicit negotiation, intervention, discussion, cooperation, and evaluation are essential elements in a constructive learning process in which the student's informal methods are used as a lever to attain the formal ones. In this interactive instruction students are engaged in explaining, justifying, agreeing and disagreeing, questioning alternatives and reflecting.

(5) The intertwining of various learning strands or units

In RME (de Lange, 1996; Gravenmeijer, 1994), the integration of mathematical strands or units is essential. It is often called the holistic approach, which incorporates applications, implies that learning strands can not be dealt with as separate entities; instead, an intertwining of learning strands is exploited in problem solving. One of the reasons is that applying mathematics is very difficult if mathematics is taught 'vertically', that is if various subjects are taught separately, neglecting the cross-connections. In applications one usually needs more than algebra alone or geometry alone.

4. How is the realistic approach related to the constructivist approach?

Due to many similarities with RME, the theory of constructivism in mathematics is included in this review. Some differences will be discussed as well. In general, constructivism means that programs start from the philosophy that give learners the freedom of their own construction or reconstruction. Three types of constructivism that are used in mathematics education are known as:

- radical constructivism: knowledge can not simply be transferred ready-made from parent to child or from teacher to student but has to be actively built by each learner in his or her own mind (Glaserfeld, 1992). Here, students usually do deal with meanings, and when instructional program fail to develop appropriate meanings, students create their own meanings. But Ernest (1991) argued this type of constructivism is lack of a social dimension in which the students learn dependently;
- social-constructivism: Ernest (1991) comes up with a new type of constructivism that is called social-constructivism which views mathematics as a social construction which means that students can better construct their knowledge when it is embedded in a social process (Ernest, 1991); and
- socio-constructivist: this type of social constructivism is developed only in mathematics education. The characteristics of this type are almost similar to the characteristics of RME such

The Impact of Executive Management Education Lisa Anderson,Paul Ellwood,Clare Rigg,Leighann Spencer,2025-05-06 This book contributes to the debate about the impact of business and management schools It brings together work that has been carried out over the last few years to call attention to the idea that the impact of academics is not solely achieved through their research and engagement activities and that their teaching has the potential to change management practice and thinking As business school academics the authors are in the privileged position of educating the managers of the future whose work will influence the lives of many others both on a day to day basis within their organisations and in a much broader societal way They propose relational management education RME as an approach that supports managers to learn and develop as ethical and collegial scholar practitioners They also introduce models which can help conceptualise pedagogies for impact and examples of student learning journeys showing how this approach can be enacted The book will be of interest to academics in business and management schools at any career stage It will also appeal to university and business school leaders and policymakers seeking to extend their understanding of the power and potential of education to achieve impact
