New Horizons in Evolutionary Robotics Stéphane Doncieux, Nicolas Bredeche, Jean-Baptiste Mouret, 2011-02-14 Evolutionary Algorithms EAs now provide mature optimization tools that have successfully been applied to many problems from designing antennas to complete robots and provided many human competitive results In robotics the integration of EAs within the engineer s toolbox made tremendous progress in the last 20 years and proposes new methods to address challenging problems in various setups modular robotics swarm robotics robotics with non conventional mechanics e g high redundancy dynamic motion multi modality etc This book takes its roots in the workshop on New Horizons in Evolutionary Design of Robots that brought together researchers from Computer Science and Robotics during the IEEE RSJ International Conference on Intelligent Robots and Systems IROS 2009 in Saint Louis USA This book features extended contributions from the workshop thus providing various examples of current problems and applications with a special emphasis on the link between Computer Science and Robotics It also provides a comprehensive and up to date introduction to Evolutionary Robotics after 20 years of maturation as well as thoughts and considerations from several major actors in the field This book offers a comprehensive introduction to the current trends and challenges in Evolutionary Robotics for the next decade

New Methods and Paradigms for Modeling Dynamic Processes Based on Cellular Automata Bilan, Stepan Mykolayovych, Bilan, Mykola Mykolayovych, Motornyuk, Ruslan Leonidovich, 2020-10-16 The accelerating development of computer technology and communications can replace many of the functions of human intellectual activity as well as help them in making decisions in various situations of their lives To implement intelligent functions for various purposes numerous models paradigms architectures and hardware and software are being developed Because the world is constantly evolving there is a need to constantly study various dynamic processes to determine possible negative situations that can lead to undesirable catastrophic phenomena and changes Recently more attention has been paid to the study of natural processes in nature Scientific works are appearing that describe the behavior and development of living organisms and the processes of their interaction Cellular automata are increasingly used to describe and model them New Methods and Paradigms for Modeling Dynamic Processes Based on Cellular Automata is a

collection of innovative research that describes the models and paradigms of building cellular automata that allows for the simulation of the dynamics of the interaction of living organisms from a different scientific point of view For this asynchronous cellular automata with a dynamically changing number of living cells are used The chapters describe the theoretical concepts of constructing asynchronous cellular automata with active cells Much attention is paid to the use of the proposed theoretical principles for solving modeling problems and solving specific applied problems of forming pseudorandom sequences and image processing based on modeling of the human visual channel Featuring research on topics such as colony interaction image processing and recognition and influence mode this book is ideally designed for engineers programmers software developers researchers academicians and students
