Reliability-based Analysis and Design Methods for Reinforced Concrete Protective Structures Lawrence A. Twisdale, 1993 The objective of this research was to develop reliability based design methods for reinforced protective concrete structures The analysis and design methods in the Air Force Protective Construction Design Manual PCDM provided the nominal deterministic methods that were used to perform probabilistic response analyses and the reliability assessments One of the key objectives of this effort was to develop simplified reliability based design methods in the form of reliability based design factors RBDFs that can be used by designers who are unfamiliar with probabilistic methods Research was conducted in five

fundamental areas 1 airblast and aboveground structure response 2 groundshock and belowground structure response 3 fragmentation effects 4 projectile penetration 5 protective structure systems reliability In each of the areas emphasis was on reinforced concrete structures however the load uncertainty analyses are applicable to structures of any materials In some instances we found significant biases in the PCDM models In those cases where we found significant biases that could not be corrected without changes to the fundamental approach RBDFs were not developed Over twenty tables of RBDFs were developed for use with the PCDM procedures Conventional Weapon Effects Fragmentation Airblast Groundshock Penetration Reliability **NASA Technical Paper**, 1989 Rehabilitation Robotics: Challenges in Design, Control, and Real Applications Francisco Romero Sánchez, Luciano Luporini Menegaldo, Josep M.
