Selected Topics In Complex Analysis Selected Topics In Complex Analysis:

Complex Analysis Mario Gonzalez, 2018-03-09 A selection of some important topics in complex analysis intended as a sequel to the author's Classical complex analysis see preceding entry The five chapters are devoted to analytic continuation conformal mappings univalent functions and nonconformal mappings entire function meromorphic functions

Selected Topics in Complex Analysis Vladimir Ya. Eiderman, Mikhail V. Samokhin, 2005-04-20 This volume opens with a paper by V P Havin that presents a comprehensive survey of the work of mathematician S Ya Khavinson It includes a complete bibliography previously unpublished of 163 items and twelve peer reviewed research and expository papers by leading mathematicians including the joint paper by Khavinson and T S Kuzina The emphasis is on the usage of tools from functional analysis potential theory algebra and topology

Complex Analysis Mario O. González, 1991

Complex Analysis and Special Topics in Harmonic Analysis Carlos A. Berenstein, Roger Gay, 2012-12-06 A companion volume to the text *Complex Variables An Introduction* by the same authors this book further develops the theory continuing to emphasize the role that the Cauchy Riemann equation plays in modern complex analysis Topics considered include Boundary values of holomorphic functions in the sense of distributions interpolation problems and ideal theory in algebras of entire functions with growth conditions exponential polynomials the G transform and the unifying role it plays in complex analysis and transcendental number theory summation methods and the theorem of L Schwarz concerning the solutions of a homogeneous convolution equation on the real line and its applications in harmonic function theory

Lectures on Selected Topics in Mathematical Physics William A. Schwalm, 2015-12-31 This volume is a basic introduction to certain aspects of elliptic functions and elliptic integrals Primarily the elliptic functions stand out as closed solutions to a class of physical and geometrical problems giving rise to nonlinear differential equations While these nonlinear equations may not be the types of greatest interest currently the fact that they are solvable exactly in terms of functions about which much is known makes up for this The elliptic functions of Jacobi or equivalently the Weierstrass elliptic functions inhabit the literature on current problems in condensed matter and statistical physics on solitons and conformal representations and all sorts of famous problems in classical mechanics The lectures on elliptic functions have evolved as part of the first semester of a course on theoretical and mathematical methods given to first and second year graduate students in physics and chemistry at the University of North Dakota They are for graduate students or for researchers who want an elementary introduction to the subject that nevertheless leaves them with enough of the details to address real problems The style is supposed to be informal The intention is to introduce the subject as a moderate extension of ordinary trigonometry in which the reference circle is replaced by an ellipse This entire depends upon fewer tools and has seemed less intimidating than other typical introductions to the subject that depend on some knowledge of complex variables The first three lectures assume only calculus including the chain rule and elementary knowledge of differential equations In the later lectures the complex analytic properties are

introduced naturally so that a more complete study becomes possible

Handbook of Complex Analysis Reiner Kuhnau, 2004-12-09 Geometric Function Theory is that part of Complex Analysis which covers the theory of conformal and quasiconformal mappings Beginning with the classical Riemann mapping theorem there is a lot of existence theorems for canonical conformal mappings On the other side there is an extensive theory of qualitative properties of conformal and quasiconformal mappings concerning mainly a priori estimates so called distortion theorems including the Bieberbach conjecture with the proof of the Branges Here a starting point was the classical Schwarz lemma and then Koebe's distortion theorem There are several connections to mathematical physics because of the relations to potential theory in the plane The Handbook of Geometric Function Theory contains also an article about constructive methods and further a Bibliography including applications eg to electrostatic problems heat conduction potential flows in the plane A collection of independent survey articles in the field of Geometric Function Theory Existence theorems and qualitative properties of conformal and quasiconformal mappings A bibliography including many hints to applications in electrostatics heat conduction potential flows in the plane

Selected Topics in the Classical Theory of Functions of a Complex Variable Maurice Heins, 2015-01-14 Elegant and concise this text explores properties of meromorphic functions Picard theorem harmonic and subharmonic functions applications and boundary behavior of the Riemann mapping function for simply connected Jordan regions 1962 edition

Selected topics in discrete mathematics: Proceedings of the Moscow Discrete Mathematics Seminar, 1972-1990 Alexander K. Kelmans, 1994-02-18 This is a collection of translations of a variety of papers on discrete mathematics by members of the Moscow Seminar on Discrete Mathematics This seminar begun in 1972 was marked by active participation and intellectual ferment Mathematicians in the USSR often encountered difficulties in publishing so many interesting results in discrete mathematics remained unknown in the West for some years and some are unknown even to the present day To help fill this communication gap this collection offers papers that were obscurely published and very hard to find Among the topics covered here are graph theory network flow and multicommodity flow linear programming and combinatorial optimization matroid theory and submodular systems matrix theory and combinatorics parallel computing complexity of algorithms random graphs and statistical mechanics coding theory and algebraic combinatorics and group theory

Selected Topics in Complex Analysis Vladimir Ya. Eiderman, Mikhail V. Samokhin, 2006-03-30 This volume is dedicated to the memory of the outstanding mathematician S Ya Khavinson It begins with an expository paper by V P Havin presenting a comprehensive survey of Khavinson's works as well as certain biographical material The complete bibliography following this paper has not previously been published anywhere It consists of 163 items a considerable part of these cannot be found in easily accessible sources The book also contains a series of photographs and twelve original peer reviewed research and expository papers by leading mathematicians worldwide including the joint paper by S Ya Khavinson and T S Kuzina the last publication of S Ya Khavinson

Selected Topics in Integral Geometry Izrail_ Moiseevich Gel_fand, Semen

Grigor_evich Gindikin, Mark Iosifovich Graev, 2003-09-02 The miracle of integral geometry is that it is often possible to recover a function on a manifold just from the knowledge of its integrals over certain submanifolds The founding example is the Radon transform introduced at the beginning of the 20th century Since then many other transforms were found and the general theory was developed Moreover many important practical applications were discovered the best known but by no means the only one being to medical tomography The present book is a general introduction to integral geometry the first from this point of view for almost four decades The authors all leading experts in the field represent one of the most influential schools in integral geometry The book presents in detail basic examples of integral geometry problems such as the Radon transform on the plane and in space the John transform the Minkowski Funk transform integral geometry on the hyperbolic plane and in the hyperbolic space the horospherical transform and its relation to representations of $SL(2, \mathbb{C})$ integral geometry on quadrics etc The study of these examples allows the authors to explain important general topics of integral geometry such as the Cavalieri conditions local and nonlocal inversion formulas and overdetermined problems Many of the results in the book were obtained by the authors in the course of their career long work in integral geometry
