Self Assembled Peptide Nanostructures In Materials Chemistry:

Self-Assembled Peptide Nanostructures in Materials Chemistry Garifullin Ruslan, 2015-12-03 Self assembled peptide nanostructures present a vast potential for materials science These nanostructures are formed by self assembly of small molecular weight molecules Programmed assembly of peptides can be achieved by providing certain inputs at the design level Noncovalent interactions such as electrostatic interactions hydrogen bonding interactions solvophobic effects and van der Waals forces can be used as inputs determining fate of a supramolecular ensemble Supramolecular ensembles can be used as functional templates for the synthesis of hybrid organic inorganic and purely inorganic nanomaterials Peptide nanostructures can be utilized in patterning of organic materials as well For instance encapsulation of chromophore molecules in peptide nanostructures presents an interesting approach in controlling photophysical properties of enclosed molecules Peptide nanostructures have shown great versatility and applicability in materials science This fact is not surprising because numerous phenomena taking place in nature actively exploit polypeptides as a handy tool in materials synthesis and its hierarchical organization

Self-Assembled Peptide Nanostructures Jaime Castillo, Luigi Sasso, Winnie Edith Svendsen, 2012-11-21 The self organization of bionanostructures into well defined functional machineries found in nature has been a priceless source of ideas for researchers The molecules of life proteins DNA RNA etc as well as the structures and forms that these molecules assume serve as rich sources of ideas for scientists or engineers who are interested in developing bio inspired materials for innovations in biomedical fields In nature molecular self assembly is a process by which complex three dimensional structures with well defined functions are constructed starting from simple building blocks such as proteins and peptides This book introduces readers to the theory and mechanisms of peptide self assembly processes The authors present the more common peptide self assembled building blocks and discuss how researchers from different fields can apply self assembling principles to bionanotechnology applications The advantages and challenges are mentioned together with examples that reflect the state of the art of the use of self assembled peptide building blocks in nanotechnology
