Program Design 2 0 Structure Behavior Coalescence:

HCI in Business, Government and Organizations Fiona Fui-Hoon Nah, Keng Siau, 2021-07-03 This book constitutes the refereed proceedings of the 8th International Conference on HCI in Business Government and Organizations HCIBGO 2021 which was held as part of HCI International 2021 and took place virtually during July 24-29, 2021. The total of 1276 papers and 241 posters included in the 39 HCII 2021 proceedings volumes was carefully reviewed and selected from 5222 submissions. The papers included in this book were organized in topical sections as follows: electronic mobile and ubiquitous commerce; HCI in finance and industry work and business operations; innovation, collaboration and knowledge sharing; and digital transformation and artificial intelligence.

Program Design 2.0 William S. Chao, 2015-12-21 Program design or software program design is in the software systems development the design and implementation phase. That is, program design means to get a solution to furnish customers' requirements on the software system. When working on the program design, we mainly consider how to manufacture the software system but not to specify what this software system is. A software system has been designed hopefully to be an integrated whole embodied in its assembled components, their interactions with each other and the environment. Since software structure and software behavior are the two most prominent views of a software system, integrating the software structure and software behavior apparently is the best way to achieve a truly integrated whole of a software system. Because program design 1.0 does not design the integration of software structure and software behavior, very likely it will never be able to actually form an integrated whole of a software system. Structure behavior coalescence (SBC) provides an elegant way to integrate the software structure and software behavior and hence achieves a truly integrated whole of a software system. A truly integrated whole sets a path to achieve the desired program design. SBC facilitates an integrated whole. Therefore, we conclude that program design 2.0 using the SBC approach, which contains three fundamental diagrams: a framework diagram, a component operation diagram, and a c interaction flow diagram, is highly adequate in designing a software system.

HCI in Business, Government, and Organizations: Information Systems

Fiona Fui-Hoon Nah, Chuan-Hoo Tan, 2016-07-04 This volume constitutes the refereed proceedings of the Third International Conference on HCI in Business Government and Organizations HCIBGO 2016 held as part of the 18th International Conference on Human Computer Interaction HCII 2016 which took place in Toronto, Canada, in July 2016. HCII 2016 received a total of 4354 submissions of which 1287 papers were accepted for publication after a careful reviewing process. The 43 papers presented in this volume were organized in topical sections named: designing information systems; HCI in the public administration and government; HCI at work and mobile applications and services.

HCI in Business Fiona Fui-Hoon Nah, Chuan-Hoo Tan, 2015-07-20 This volume constitutes the refereed proceedings of the Second International Conference on HCI in Business HCIB 2015 held as part of the 17th International Conference on Human Computer Interaction HCII 2015 which took place in Los Angeles, CA, USA, in August 2015. HCII 2015 received a total

of 4843 submissions of which 1462 papers and 246 posters were accepted for publication after a careful reviewing process. The papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. They thoroughly cover the entire field of human computer interaction addressing major advances in knowledge and effective use of computers in a variety of application areas. The 72 papers presented in this volume address the following topics: social media for business enterprise systems, business and gamification, analytics, visualization and decision making, industry academia innovation and market.

Fire Design of Concrete Structures - Structural Behaviour and Assessment fib Fédération internationale du béton, 2008-01-01. Concrete is well known to behave efficiently in fire conditions as it is incombustible, does not emit smoke and provides good thermal insulation. Furthermore, in reinforced concrete structures, the concrete cover gives a natural protection to the reinforcement and the size of the sections often delays the heating of the core, thus favouring the fire resistance of the structural members. In addition, concrete structures are often robust and therefore able to accommodate local damage without major consequences to the overall structural integrity. However, past experience with real fires shows that a thorough understanding of concrete behaviour and structural mechanics is still needed to improve the design of R/C structures with respect to fire. The objective of fib Bulletin 46 is to augment the current knowledge about concrete and concrete structures under fire, not only for the design of new structures but also for the analysis and repair of existing fire-damaged structures. Both structural and materials issues are examined and the results of the most recent research activities on the structural performance of concrete subjected to fire are reported. Special attention is paid to the indirect actions caused by the restrained thermal deformations and several basic examples show how a local fire influences global structural behaviour. fib Bulletin 46 is intended for use by practicing engineers to improve their understanding of the behaviour of concrete structures in fire and thereby produce better and safer design standards.

Computational Modelling of Concrete Structures Gunther Meschke, René de Borst, Herbert Mang, Nenad Bicanic, 2020-11-26. This conference proceedings brings together the work of researchers and practising engineers concerned with computational modelling of complex concrete reinforced concrete and prestressed concrete structures in engineering practice. The subjects considered include computational mechanics of concrete and other cementitious materials including masonry. Advanced discretisation methods and microstructural aspects within multi-field and multi-scale settings are discussed as well as modelling formulations and constitutive modelling frameworks and novel experimental programmes. The conference also considered the need for reliable high-quality analysis and design of concrete structures in regard to safety-critical structures with a view to adopting these in codes of practice or recommendations. The book is of special interest to researchers in computational mechanics and industry experts in complex nonlinear simulations of concrete structures.
