Project Scheduling A Research Handbook International Series In Operations Research Management Science:

Project Scheduling Erik Leuven Demeulemeester, Willy S. Herroelen, 2006-04-11 Our objectives in writing Project Scheduling A Research Handbook are threefold 1 Provide a unified scheme for classifying the numerous project scheduling problems occurring in practice and studied in the literature 2 Provide a unified and up to date treatment of the state of the art procedures developed for their solution 3 Alert the reader to various important problems that are still in need of considerable research effort Project Scheduling A Research Handbook has been divided into four parts Part I consists of three chapters on the scope and relevance of project scheduling on the nature of project scheduling and finally on the introduction of a unified scheme that will be used in subsequent chapters for the identification and classification of the project scheduling problems studied in this book Part II focuses on the time analysis of project networks Part III carries the discussion further into the crucial topic of scheduling under scarce resources Part IV deals with robust scheduling and stochastic scheduling issues Numerous tables and figures are used throughout the book to enhance the clarity and effectiveness of the discussions For the interested and motivated reader the problems at the end of each chapter should be considered as an integral part of the presentation

Repetitive Project Scheduling: Theory and Methods Li-hui Zhang, 2015-07-02 Repetitive Project Scheduling Theory and Methods is the first book to comprehensively and systematically review new methods for scheduling repetitive projects that have been developed in response to the weaknesses of the most popular method for project scheduling the Critical Path Method CPM As projects with significant levels of repetitive scheduling are common in construction and engineering especially construction of buildings with multiple stories highways tunnels pipelines power distribution networks and so on the book fills a much needed gap introducing the main repetitive project scheduling methods both comprehensively and systematically Users will find valuable information on core methodologies including how to identify the controlling path and controlling segment how to convert RSM to a network model and examples based on practical scheduling problems Introduces the repetitive scheduling method with analysis of the pros and cons as well as the latest developments Discusses the two basic theoretical topics identifying the controlling path and transferring the RSM to a network model Focuses on practical problems and algorithms Provides an essential resource for researchers managers and engineers in the field of engineering project and construction management

Resource-Constrained Project Scheduling Christian Artigues, Sophie Demassey, Emmanuel Néron, 2013-03-01 This title presents a large variety of models and algorithms dedicated to the resource constrained project scheduling problem RCPSP which aims at scheduling at minimal duration a set of activities subject to precedence constraints and limited resource availabilities In the first part the standard variant of RCPSP is presented and analyzed as a combinatorial optimization problem Constraint programming and integer linear programming formulations are given Relaxations based on these formulations and also on related scheduling problems are presented Exact methods and heuristics are surveyed

Computational experiments aiming at providing an empirical insight on the difficulty of the problem are provided The second part of the book focuses on several other variants of the RCPSP and on their solution methods Each variant takes account of real life characteristics which are not considered in the standard version such as possible interruptions of activities production and consumption of resources cost based approaches and uncertainty considerations The last part presents industrial case studies where the RCPSP plays a central part Applications are presented in various domains such as assembly shop and rolling ingots production scheduling project management in information technology companies and instruction scheduling for VLIW processor architectures

Perspectives in Modern Project Scheduling Joanna Jozefowska, Jan Weglarz, 2006-12-11 Operations Research began with the mathematical scheduling of a massive project logistically supplying Europe with military equipment and goods during the WWII Today project scheduling research continues growing in a variety of its theoretical models in its magnitude and application As the world becomes more interrelated and complex the wider its research is applied to an increasing number of project scheduling problems Project Scheduling Surveying the State of the Art surveys the current state of the art in operations research with chapters written by the respective leading experts on each topic It covers the range of the key models in the field including deterministic probabilistic single and multi mode single and multi objective and a general model on discrete continuous resources Recent solution algorithms are systematical examined The book summarizes the current developments and theoretical achievements in the field including project uncertainty and grid resource management

Production Scheduling Pierre Lopez, François Roubellat, 2013-03-01 The performance of a company depends both on its technological expertise and its managerial and organizational effectiveness Production management is an important part of the process for manufacturing firms The organization of production relies in general on the implementation of a certain number of basic functions among which the scheduling function plays an essential role This title presents recently developed methods for resolving scheduling issues The basic concepts and the methods of production scheduling are introduced and advanced techniques are discussed providing readers with a comprehensive and accessible guide to employing this process

Essays in Production, Project Planning and Scheduling P. Simin Pulat, Subhash C. Sarin, Reha Uzsoy, 2013-12-02 From the Preface This festschrift is devoted to recognize the career of a man who not only witnessed the growth of operations research from its inception but also contributed significantly to this growth Dr Salah E Elmaghraby received his doctorate degree from Cornell University in 1958 and since then his scholarly contributions have enriched the fields of production planning and scheduling and project scheduling This collection of papers is contributed in his honor by his students colleagues and acquaintances It offers a tribute to the inspiration received from his work and from his guidance and advice over the years and recognizes the legacy of his many contributions Dr Elmaghraby is a pioneer in the area of project scheduling in particular project planning and control through network models for which he coined the term activity networks In his initial work in this area he developed an algebra based on signal flow

graphs and semi Markov processes for analyzing generalized activity networks involving activities with probabilistic durations This work led to the development of what was later known as the Graphical Evaluation and Review Technique GERT and GERT simulation models He has made fundamental contributions in determining criticality indices for activities in developing methodologies for project compression and time cost analysis and in the use of stochastic and chance constrained programming and Petri Nets for the analysis of activity networks This volume brings together fourteen contributions which can be viewed under the following three main themes operations research and its application in production planning project scheduling and production scheduling inspired by and in many cases based on Dr Elmaghraby s work in these areas The first five chapters are devoted to the first theme followed by four chapters each devoted to the other two respectively An additional chapter is devoted to the vulnerability of multimodal freight systems

Handbook of Operations Research in Natural Resources Andres Weintraub, Carlos Romero, Trond Bjørndal, Rafael Epstein, 2007-09-19 Handbook of Operations Research in Natural Resources will be the first systematic handbook treatment of quantitative modeling natural resource problems their allocated efficient use and societal and economic impact Andr s Weintraub is the very top person in Natural Resource research Moreover he has an international reputation in OR and a former president of the International Federation of Operational Research Societies IFORS He has selected co editors who are at the top of the sub fields in natural resources agriculture fisheries forestry and mining The book will cover these areas in terms with contributions from researchers on modeling natural research problems quantifying data developing algorithms and discussing the benefits of research implementations The handbook will include tutorial contributions when necessary Throughout the book technological advances and algorithmic developments that have been driven by natural resource problems will be called out and discussed

The Theory of Search Games and Rendezvous Steve Alpern, Shmuel Gal, 2006-04-10 Search Theory is one of the original disciplines within the field of Operations Research It deals with the problem faced by a Searcher who wishes to minimize the time required to find a hidden object or target The Searcher chooses a path in the search space and finds the target when he is sufficiently close to it Traditionally the target is assumed to have no motives of its own regarding when it is found it is simply stationary and hidden according to a known distribution e g oil or its motion is determined stochastically by known rules e g a fox in a forest The problems dealt with in this book assume on the contrary that the target is an independent player of equal status to the Searcher who cares about when he is found We consider two possible motives of the target and divide the book accordingly Book I considers the zero sum game that results when the target here called the Hider does not want to be found Such problems have been called Search Games with the ze sum qualifier understood Book II considers the opposite motive of the target namely that he wants to be found In this case the Searcher and the Hider can be thought of as a team of agents simply called Player I and Player II with identical aims and the coordination problem they jointly face is called the Rendezvous Search Problem

Foreign-Exchange-Rate Forecasting with Artificial Neural Networks Lean Yu,Shouyang Wang,Kin Keung Lai,2010-02-26 The foreign exchange market is one of the most complex dynamic markets with the characteristics of high volatility nonlinearity and irregularity Since the Bretton Woods System collapsed in 1970s the fluctuations in the foreign exchange market are more volatile than ever Furthermore some important factors such as economic growth trade development interest rates and inflation rates have significant impacts on the exchange rate fluctuation Meantime these characteristics also make it extremely difficult to predict foreign exchange rates Therefore exchange rates forecasting has become a very important and challenge research issue for both academic and industrial communities In this monograph the authors try to apply artificial neural networks ANNs to exchange rates forecasting Selection of the ANN approach for exchange rates forecasting is because of ANNs unique features and powerful pattern recognition capability Unlike most of the traditional model based forecasting techniques ANNs are a class of data driven self adaptive and nonlinear methods that do not require specific assumptions on the underlying data generating process These features are particularly appealing for practical forecasting situations where data are abundant or easily available even though the theoretical model or the underlying relationship is known Furthermore ANNs have been successfully applied to a wide range of forecasting problems in almost all areas of business industry and engineering In addition ANNs have been proved to be a universal functional approximator that can capture any type of complex relationships
