Procuring Complex Performance Nigel Caldwell, Mickey Howard, 2010-09-13 This book examines the management of Procuring Complex Performance PCP in large scale programmes that includes the downstream support phase in sectors such as construction healthcare transport aerospace marine and defence It brings together a series of edited chapters to explain why the traditional combination of linear project management and highly detailed contracts are now unsuited to the dynamics of emerging customer requirements based on performance and outcome Working with leading

business professors across the UK and Europe Caldwell and Howard present the case for why large scale programmes of world class organizations often represent a shifting frontier between the boundaries of public private provision and silos of operations expertise Adopting a procurement perspective the authors explain how complex performance means not just coping with the dynamics of buyer supplier relationships but incorporates the shift from production orientation towards availability of bundled services such as maintenance and upgrade delivered over extended often multi decade timeframes The strength of PCP is its empirical case based support for new business models based on through life management availability contracting and service support which challenge simplistic notions of dyadic hierarchical relationships and transfer of risk to the supply base This unique publication is essential reading for scholars and practitioners seeking to understand the context of innovation and supply as a coordinated and integrated approach to managing and procuring complex performance

Smith, Samuel Y. Appiah, 2021-04-12 As an industrial process construction is unique The procurement processes used to achieve the successful completion of built assets requires a different approach to that adopted in most other industries due to the design of buildings being bespoke and the sites being geographically varied The procurement process is central to the success of any construction project and many of the problems which impact construction projects can be traced back to the

procurement phase so a good understanding of the methods of procurement the development of a procurement strategy and the influence it has on project success is essential for all those working in the industry Much has changed in the global construction industry since publication of the second edition of Building Procurement for example the increase in debt burden of many major economies widespread adoption of Building Information Modelling BIM Technology in the industry and the United Kingdom s exit from the European Union This new edition has been rewritten to take account of these significant developments but at its core it continues to provide a critical examination and review of current procurement practices in the UK continental Europe including EU procurement procedures China Middle East and Sub Saharan Africa and the USA It retains its original strong emphasis on the need for clients to establish achievable objectives which reflect the project business case and focuses on development of suitable strategies and management structures to meet those objectives in the current construction climate Building Procurement will be essential reading for senior undergraduate and postgraduate students of construction management and practitioners working in all areas of construction management
