Readings In The History Of Evolutionary Theory Selections From Primary Sources:

Readings in the History of Evolutionary Theory Ronald K. Wetherington, 2011 This collection of primary source readings covers the history of evolutionary theory from its roots in Classical Greece to the present Beginning with excerpts from Plato and Aristotle the volume proceeds chronologically through the time of Darwin and ends with a look at the revolutions in thought such as evolutionary development biology that carry the evolutionary narrative from Darwin to the current day Wetherington begins each chapter with an overview that contextualizes the selections it contains Vivid biographical sketches at the beginning of each reading illuminate the authors and the oeuvre out of which each work arose These overviews and sketches are designed to assist students in drawing historical distinctions and parallels between the preceding and succeeding units of the book while discussion questions at the end of each unit allow students to apply the history of evolutionary theory to their own lives Suggestions for further reading are also provided so that students can pursue their study of evolutionary theory outside of the classroom

Science and Technology in World History James E. McClellan III, Harold Dorn, 2015-12-15 Arguably the best general history of science and technology ever published Tracing the relationship between science and technology from the dawn of civilization to the early twenty first century James E McClellan III and Harold Dorn's bestselling book argues that technology as applied science emerged relatively recently as industry and governments began funding scientific research that would lead directly to new or improved technologies McClellan and Dorn identify two great scientific traditions the useful sciences which societies patronized from time immemorial and the exploration of questions about nature itself which the ancient Greeks originated The authors examine scientific traditions that took root in China India and Central and South America as well as in a series of Near Eastern empires in late antiquity and the Middle Ages From this comparative perspective McClellan and Dorn survey the rise of the West the Scientific Revolution of the seventeenth century the Industrial Revolution and the modern marriage of science and technology They trace the development of world science and technology today while raising provocative questions about the sustainability of industrial civilization This new edition of *Science and Technology in World History* offers an enlarged thematic introduction and significantly extends its treatment of industrial civilization and the technological supersystem built on the modern electrical grid The Internet and social media receive increased attention Facts and figures have been thoroughly updated and the work includes a comprehensive Guide to Resources incorporating the major published literature along with a vetted list of websites and Internet resources for students and lay readers

The New Eugenics Conrad B. Quintyn Ph.D., 2020-12-17 The specter of early twentieth century eugenics with its goal of preventing the unfit from reproducing through forced sterilization still haunts us in this era of genetic engineering Conrad B Quintyn an associate professor of biological anthropology at Bloomsburg University Bloomsburg Pennsylvania calls this the new eugenics era because geneticists have begun to explore ways to prevent and repair defective genes in all humans In this book he considers whether genetic

engineering will exacerbate social injustices and or lead to a public safety issue For instance in 2012 virologists in the U S and the Netherlands genetically engineered avian bird flu to be more transmissible between mammals These scientists argued that virus transmission between mammals enables us to make vaccines to prevent pandemics They never considered what would happen if the virus accidentally escaped the laboratory Meanwhile some scientists are experimenting with designer babies altering genes to remove diseases and even programming certain traits Join the author as he considers whether scientists are playing God as well as the risks we face by altering genetics in *The New Eugenics* **Biotechnology: Scientific Advancement Versus Public Safety** Conrad B Quintyn, 2022-10-07 In this book Dr Quintyn considers whether genetic engineering will exacerbate social injustices and or lead to public safety issues As designer babies mature will they feel a sense of superiority or pass on mutations that negatively affect future generations Should we ignore the risk of zoonotic animal diseases because they offer potential benefits for reducing organ shortages Scientific advancement if not guided responsibly and with public input can be detrimental to public safety This book is unique as it encompasses many biotechnologies within the definition of biotechnology It gives a balanced view of biotechnology its promise as evidenced in repairing mutations i e genetic editing and its dangers evidenced in creating unintentionally dangerous microbes or unregulated germline editing and cloning Additionally this book includes animals in biotechnological research because the success advances techniques and science of genetic engineering could not have occurred without using animals and microorganisms insects plants as model organisms A comprehensive description of the CRISPR system in bacteria and the exploitation of this knowledge in creating the CRISPR Cas9 technology is also incorporated in this read The author s overall goal is to discuss other biotechnology that is being used to improve and put at risk the health environment and safety of humans giving the book a competitive edge Furthermore the book provides a provocative side in challenging scientists to consider the current belief governing research and development which is that scientific advancement and public safety create a false dichotomy
