Veronesi,2010-01-12 The deep understanding of the forces that affect the valuation risk and return of fixed income securities and their derivatives has never been so important As the world of fixed income securities becomes more complex anybody who studies fixed income securities must be exposed more directly to this complexity This book provides a thorough discussion of these complex securities the forces affecting their prices their risks and of the appropriate risk management practices Fixed Income Securities however provides a methodology and not a shopping list It provides instead examples and methodologies that can be applied quite universally once the basic concepts have been understood **A MatLab®**

Companion to Complex Variables A. David Wunsch,2016-04-27 This book is intended for someone learning functions of a complex variable and who enjoys using MATLAB It will enhance the experience of learning complex variable theory and will strengthen the knowledge of someone already trained in this branch of advanced calculus ABET the accrediting board for engineering programs makes it clear that engineering graduates must be skilled in the art of programming in a language such as MATLAB Supplying students with a bridge between the functions of complex variable theory and MATLAB this supplemental text enables instructors to easily add a MATLAB component to their complex variables courses A MATLAB Companion to Complex Variables provides readers with a clear understanding of the utility of MATLAB in complex variable

calculus An ideal adjunct to standard texts on the functions of complex variables the book allows professors to quickly find and assign MATLAB programming problems that will strengthen students knowledge of the language and concepts of complex variable theory The book shows students how MATLAB can be a powerful learning aid in such staples of complex variable theory as conformal mapping infinite series contour integration and Laplace and Fourier transforms In addition to MATLAB programming problems the text includes many examples in each chapter along with MATLAB code Fractals the most recent interesting topic involving complex variables demands to be treated with a language such as MATLAB This book concludes with a Coda which is devoted entirely to this visually intriguing subject MATLAB is not without constraints limitations irritations and quirks and there are subtleties involved in performing the calculus of complex variable theory with this language Without knowledge of these subtleties engineers or scientists attempting to use MATLAB for solutions of practical problems in complex variable theory suffer the risk of making major mistakes This book serves as an early warning system about these pitfalls

Metrics, Norms, Inner Products, and Operator Theory Christopher Heil, 2018-08-28 This text is a self contained introduction to the three main families that we encounter in analysis metric spaces normed spaces and inner product spaces and to the operators that transform objects in one into objects in another With an emphasis on the fundamental properties defining the spaces this book guides readers to a deeper understanding of analysis and an appreciation of the field as the science of functions Many important topics that are rarely presented in an accessible way to undergraduate students are included such as unconditional convergence of series Schauder bases for Banach spaces the dual of l_p topological isomorphisms the Spectral Theorem the Baire Category Theorem and the Uniform Boundedness Principle The text is constructed in such a way that instructors have the option whether to include more advanced topics Written in an appealing and accessible style Metrics Norms Inner Products and Operator Theory is suitable for independent study or as the basis for an undergraduate level course Instructors have several options for building a course around the text depending on the level and interests of their students Key features Aimed at students who have a basic knowledge of undergraduate real analysis All of the required background material is reviewed in the first chapter Suitable for undergraduate level courses no familiarity with measure theory is required Extensive exercises complement the text and provide opportunities for learning by doing A separate solutions manual is available for instructors via the Birkh user website www.springer.com 978 3 319 65321 1 Unique text providing an undergraduate level introduction to metrics norms inner products and their associated operator theory
