Environmental and Resources Geochemistry of Earth System Naotatsu Shikazono, 2015-01-05 The Earth system consists of subsystems that include the atmosphere hydrosphere water geosphere rocks minerals biosphere and humans In order to understand these subsystems and their interactions it is essential to clarify the mass transfer mechanism geochemical cycle and influence of human activity on the natural environment This book presents fundamental theories thermodynamics kinetics mass balance model coupling models such as the kinetics fluid flow model the box model and others concerning mechanisms in weathering formation of hydrothermal ore deposits hydrothermal alteration formation of groundwater quality and the seawater system The interaction between fluids atmosphere water and solid phases rocks minerals occurs both in low temperature and also in high temperature systems This book considers the complex low temperature cycle with the high temperature cycle a combination that has not been dealt with in previous books concerning Earth systems Humanity is a small part of the biosphere however human activities greatly influence Earth's surface environments atmosphere hydrosphere biosphere soils rocks Thus the influences of humans on

other subsystems particularly mass transfer in the deep underground geologic environment composed of host rocks and groundwater are discussed in relation to high level nuclear waste geologic disposal and CO₂ underground sequestration topics that have not been included in other books on environmental science **Using Geochemical Data** Hugh Richard Rollinson, Hugh Rollinson, Victoria Pease, 2021-05-06 How best to interpret and apply geochemical data to understand geological processes for graduate students researchers and professionals
