The book introduces students and professionals to the basics of real estate finance theory before providing a step by step guide for financial model construction using Excel. The idea that real estate is an asset with unique characteristics which can be transformed both physically and financially forms the basis of discussion. Individual chapters are separated by functional unit and build upon themselves to include information on Amortization, Single Family Unit, Multi Family Unit, Development, Construction, Addition, Waterfall, Equity, Bifurcation, Accounting, Statements, Additional Asset Classes. Further chapters are dedicated to risk quantification and include scenario, stochastic and Monte Carlo simulations, waterfalls and securitized products. The book provides individuals with a step by step instruction on how to construct a real estate financial model that is both scalable and modular.
