Peripheral Electronics User Manual:

Peripheral Vision Zabet Patterson, 2023-08-15 How the S C 4020 a mainframe peripheral intended to produce scientific visualizations shaped a series of early computer art projects that emerged from Bell Labs In 1959 the electronics manufacturer Stromberg Carlson produced the S C 4020 a device that allowed mainframe computers to present and preserve images In the mainframe era the output of text and image was quite literally peripheral the S C 4020 a strange and elaborate apparatus with a cathode ray screen a tape deck a buffer unit a film camera and a photo paper camera produced most of the computer graphics of the late 1950s and early 1960s At Bell Laboratories in Murray Hill New Jersey the S C 4020 became a crucial part of ongoing encounters among art science and technology In this book Zabet Patterson examines the extraordinary uses to which the Bell Labs SC 2040 was put between 1961 and 1972 exploring a series of early computer art projects shaped by the special computational affordances of the S C 4020 The S C 4020 produced tabular data graph plotting and design drawings grid projections and drawings of axes and vectors it made previously impossible visualizations possible Among the works Patterson describes are E E Zajac s short film of an orbiting satellite which drew on the machine s graphic capacities as well as the mainframe s calculations a groundbreaking exhibit of computer generated pictures by B la Julesz and Michael Noll two scientists interested in visualization animations by Kenneth Knowlton and the Bell Labs artist in residence Stan VanDerBeek and Lillian Schwartz s cybernetic film Pixillation Arguing for the centrality of a peripheral Patterson makes a case for considering computational systems not simply as machines but in their cultural and historical context
