New Concepts Natural Language Generation:

New Concepts in Natural Language Generation Helmut Horacek, 2015-12-17 This book aims to inform researchers with an interest in natural language generation about advances in the field It is organised around four topics system architectures content planning discourse planning and realisation in linguistic form and it presents some of the most important works in this area of research **Natural Language Generation in Interactive Systems** Amanda Stent, Srinivas

Bangalore, 2014-06-12 A comprehensive overview of the state of the art in natural language generation for interactive systems with links to resources for further research *Building Natural Language Generation Systems* Ehud Reiter, Robert

Dale, 2000-01-28 This book explains how to build Natural Language Generation NLG systems computer software systems which use techniques from artificial intelligence and computational linguistics to automatically generate understandable texts in English or other human languages either in isolation or as part of multimedia documents Web pages and speech output systems Typically starting from some non linguistic representation of information as input NLG systems use knowledge about language and the application domain to automatically produce documents reports explanations help messages and other kinds of texts The book covers the algorithms and representations needed to perform the core tasks of document planning microplanning and surface realization using a case study to show how these components fit together It also discusses engineering issues such as system architecture requirements analysis and the integration of text generation into multimedia and speech output systems **Cognition and Pragmatics** Dominiek Sandra, Jan-Ola Östman, Jef

Verschueren, 2009 The ten volumes of Handbook of Pragmatics Highlights focus on the most salient topics in the field of pragmatics thus dividing its wide interdisciplinary spectrum in a transparent and manageable way While other volumes select philosophical grammatical social variational interactional or discursive angles this third volume focuses on the interface between language and cognition Language use is impossible without the mobilization of a large variety of cognitive processes each serving a different purpose During the last half century cognitive approaches to language have been particularly successful and the broad spectrum of contributions to this volume testify to this success As cognitive approaches to language are by definition a subset of the larger enterprise of cognitive science a contribution on this general topic sets the stage This is joined by a chapter on cognitive grammar a theoretical study of the architecture of human language that is deeply inspired by general cognitive principles A chapter on experimentation offers a crash course on basic issues of experimental design and on the rationale behind statistical testing in general and the most important statistical tests in particular offering a methodological toolkit for understanding many of the other contributions Different chapters cover a broad range of topics language acquisition psycholinguistics specialized topics within the latter field e g the bilingual mental lexicon categorization and aspects of language awareness Some chapters home in on what have become indispensable perspectives on the cognitive underpinnings of language the way language is represented and processed in the human brain

and simulation studies The ever growing success of the latter type of studies is exemplified for instance by the highly flourishing connectionist tradition and the more general paradigm of artificial intelligence each of which is dealt with in a separate contribution

Syntactic Form and Discourse Function in Natural Language Generation

Cassandra Creswell, 2004-12-24 Users of natural languages have many word orders with which to encode the same truth conditional meaning They choose contextually appropriate strings from these many ways with little conscious effort and with effective communicative results Previous computational models of when English speakers produce non canonical word orders like topicalization left dislocation and clefts fail The primary goal of this book is to present a better model of when speakers choose to produce certain non canonical word orders by incorporating the effects of discourse context and speaker goals on syntactic choice This book makes extensive use of previously unexamined naturally occurring corpus data of non canonical word order in English both to illustrate the points of the theoretical model and to train the statistical model

Natural Language Generation Ehud Reiter, 2024-10-15 In late 2022 the prominence of Natural Language Generation NLG surged with the advent of advanced language models like ChatGPT While these developments have captivated both academic and commercial sectors the focus has predominantly been on the latest innovations often overlooking the rich history and foundational work in NLG This book aims to provide a comprehensive overview of NLG encompassing not only language models but also alternative approaches user requirements evaluation methods safety and testing protocols and practical applications Drawing on decades of NLG research the book is designed to be a valuable resource for both researchers and developers offering insights that remain relevant far beyond the current technological landscape Natural Language Generation focuses on data to text but also looks at other types of NLG including text summarization The book takes a holistic approach to NLG looking at requirements what users are looking for design data issues testing evaluation safety and ethical issues as well as technology The holistic approach is unique to this book and is very valuable for people building real world NLG systems and for academics and researchers who are interested in applied NLG The author who previously co authored a seminal NLG book in 2000 emphasizes high level concepts and methodologies ensuring the material s longevity and utility The book is structured to balance technical depth with practical relevance including chapters on rule based and neural NLG approaches user requirements rigorous evaluation techniques and safety considerations Real world applications particularly in journalism business intelligence summarization and medicine are explored to illustrate NLG s potential and scalability With personal anecdotes and examples from the author s experiences this book provides a unique and engaging perspective on the evolving field of NLG making it an indispensable guide for those looking to harness the power of language generation technologies

Empirical Methods in Natural Language Generation

Emiel Krahmer, Mariet Theune, 2010-09-09 Natural language generation NLG is a subfield of natural language processing NLP that is often characterized as the study of automatically converting non linguistic representations e g from databases or other knowledge

sources into coherent natural language text In recent years the field has evolved substantially Perhaps the most important new development is the current emphasis on data oriented methods and empirical evaluation Progress in related areas such as machine translation dialogue system design and automatic text summarization and the resulting awareness of the importance of language generation the increasing availability of suitable corpora in recent years and the organization of shared tasks for NLG where different teams of researchers develop and evaluate their algorithms on a shared held out data set have had a considerable impact on the field and this book offers the first comprehensive overview of recent empirically oriented NLG research Augmented Intelligence and Intelligent Tutoring Systems Claude Frasson, Phivos

Mylonas, Christos Troussas, 2023-05-21 This book constitutes the refereed proceedings of the 19th International Conference on Augmented Intelligence and Intelligent Tutoring Systems ITS 2023 held in Corfu Greece during June 2 5 2023 The 41 full papers and 19 short papers presented in this book were carefully reviewed and selected from 84 submissions The papers are divided into the following topical sections augmented intelligence in tutoring systems augmented intelligence in healthcare informatics augmented intelligence in games serious games and virtual reality neural networks and data mining augmented intelligence and metaverse security privacy and ethics in augmented intelligence and applied natural language processing
