Systems Engineering for Business Process Change: New Directions Peter Henderson, 2012-12-06 *Systems Engineering for Business Process Change New Directions* is a collection of papers resulting from an EPSRC managed research programme set up to investigate the relationships between Legacy IT Systems and Business Processes The papers contained in this volume report the results from the projects funded by the programme which ran between 1997 and 2001 An earlier volume published in 2000 reported interim results Bringing together researchers from diverse backgrounds in Computer Science Information Systems Engineering and Business Schools this book explores the problems experienced by IT dependent businesses that have to implement changing business processes in the context of their investment in legacy systems The book presents some of the solutions investigated through the collaborations set up within the research programme Whether you are a researcher interested in the ideas that were generated by the research programme or a user trying to understand the nature of the problems and their solutions you cannot fail to be inspired by the writings contained in this volume

The Making of an Expert Engineer James Trevelyan, 2014-09-22 This book sets out the principles of engineering practice knowledge that has come to light through more than a decade of research by the author and his students studying engineers at work Until now this knowledge has been almost entirely unwritten passed on invisibly from one generation of engineers to the next what engineers refer to as experience This is a book for all engineers It distils the knowledge of many experts in one volume The book will help engineers enjoy a more satisfying and rewarding career and provide more valuable results for their employers and clients The book focuses on issues often seen as non technical in the world of engineering yet it shows how these issues are thoroughly technical Engineering firms traditionally have sought expert advice on these aspects from management schools often regarding these aspects of engineering practice as something

to do with psychology or organisational behaviour The results are normally disappointing because management schools and psychologists have limited insight and understanding of the technical dimensions in engineering work Little if any of the material in this book can be obtained from management texts or courses Management schools have avoided the technical dimension of workplace practices and that is precisely what characterises engineering practice The technical dimension infuses almost every aspect of an engineer's working day and cannot be avoided That's why this book is so necessary there has not yet been any authoritative source or guidance to bridge the gap between inanimate technical issues and organisational behaviour This book fills this gap in our knowledge is based on rigorous research and yet is written in a style which is accessible for a wide audience
