technology in expert systems and everyday life challenges the traditional conception of humans and technology as two separate elements in the analysis of work. The book shows how this dualism is evident and problematic in a wide range of areas such as investigation of human error in accidents, case studies of innovative interface solutions, simulator training, strategies, analysis of work practices in complex systems, and traffic safety research. *Embodied Minds Technical Environments* supplements the ongoing effort to understand how technology can be integrated with more confidence in modern society.
