Membrane-based Hybrid Processes for Wastewater Treatment Maulin P. Shah, Susana Rodriguez-Couto, 2021-05-27

Membrane Based Hybrid Processes for Wastewater Treatment analyzes and discusses the potential of membrane based hybrid processes for the treatment of complex industrial wastewater, the recovery of valuable compounds, and water reutilization. In addition, recent and future trends in membrane technology are highlighted. Industrial wastewater contains a large variety of compounds such as heavy metals, salts, and nutrients, which makes its treatment challenging. Thus, the use of conventional water treatment methods is not always effective. Membrane based hybrid processes have emerged as a promising technology to treat complex industrial wastewater. Discusses the properties, mechanisms, advantages, limitations, and promising solutions of different types of membrane technologies. Addresses the optimization of process parameters. Describes the performance of different membranes. Presents the potential of Nanotechnology to improve the treatment efficiency of wastewater treatment plants (WWTPs). Covers the application of membrane and membrane based hybrid treatment technologies for wastewater treatment. Includes forward osmosis, electrodialysis, and diffusion dialysis. Considers hybrid membrane systems expanded to cover zero liquid discharge, salt recovery, and removal of trace contaminants.

Anaerobically Treated Effluents Vinay Kumar Tyagi, Abid Ali Khan, Ng Wun Jern, Anwar Khursheed, A. A. Kazmi, 2019-06-15

The anaerobic process is considered to be a sustainable technology for organic waste treatment mainly due to its lower energy consumption and production of residual solids coupled with the prospect of energy recovery from the biogas generated. However, the anaerobic process cannot be seen as providing the complete solution as its treated effluents would typically not meet the desired discharge limits in terms of residual carbon nutrients and pathogens. This has given impetus to subsequent post treatment in order to meet the environmental legislations and protect the receiving water bodies and environment. This book discusses anaerobic treatment from the perspective of organic wastes and wastewaters municipal and industrial followed by various post treatment options for anaerobic effluent polishing and resource recovery. Coverage will also be from the perspective of future trends and thoughts on anaerobic technologies being able to support meeting the increasingly stringent disposal standards. The resource recovery angle is particularly interesting as this can arguably help achieve the circular economy. It is intended the information can be used to identify appropriate solutions for anaerobic effluent treatment and possible alternative approaches to the commonly applied post treatment techniques. The succeeding discussion is intended to lead on to identification of opportunities for further research and development. This book can be used as a standard reference book and textbook in universities for Master and Doctoral students. The academic community relevant to the subject namely faculty researchers, scientists and practicing engineers will find the book both informative and as a useful source of successful case studies.
